**Description of Water Delivery System**

System capacity: **1.32** cubic feet per second (cfs) **OR**  
 \_\_\_\_\_ gallons per minute (gpm)

**OWRD**

Describe the current water delivery system or the system that was in place at sometime within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. **Water is pumped to the irrigation system from Well 1 using a 15 Hp submersible pump, from Well 2 using a 2 Hp submersible pump, and from Well 3 using a 20 Hp submersible pump. Irrigation on the campus is managed using a pre-programmed computer system which monitors telemetry data received from the weather station located at the Capitol Mall in Salem, Oregon, along with other input parameters, to manage and balance water use among the various irrigation zones established throughout the campus. Mainlines consists primarily of buried PVC pipe in diameters ranging from 1 ¼ to 8 inches. A wide variety of makes, models, and sizes of sprinklers are used, depending on the zone and application. During a typical irrigation event, several irrigation zones may be irrigated at once using various types of fixed and pop-up sprinklers. Under a typical irrigation scenario, five irrigation zones may be operating with an average discharge rate of 65 to 70 gpm per zone.**

**For Place of Use or Character of Use Changes**

Are there other water right certificates, water use permits or ground water registrations associated with the “from” or the “to” lands?  Yes  No

If YES, list the certificate, water use permit, or ground water registration numbers: **NA.**

Pursuant to ORS 540.510, any “layered” water use such as an irrigation right that is supplemental to a primary right proposed for transfer must be included in the transfer or be cancelled. Any change to a ground water registration must be filed separately in a ground water registration modification application.

**For Substitution** (ground water supplemental irrigation will be substituted for surface water primary irrigation)

**For a change in point(s) of appropriation (well(s)) or additional point(s) of appropriation:**

Well log(s) are attached for each authorized and proposed well(s) that are clearly labeled and associated with the corresponding well(s) in Table 1 above and on the accompanying application map.

**Tip:** You may search for well logs on the Department’s web page at:

[http://apps.wrd.state.or.us/apps/gw/well\\_log/Default.aspx](http://apps.wrd.state.or.us/apps/gw/well_log/Default.aspx)

**AND/OR**

Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For *proposed wells not yet constructed or built*, provide “a best estimate” for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

**Table 3. Construction of Point(s) of Appropriation**

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.
