**5. WATER DELIVERY SYSTEM**

- Describe the **current** water delivery system or the system that **was in place** at some time within the last 5 years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. If the transfer involves multiple rights that have independent systems, describe each system separately.

*The description must be sufficient to demonstrate that the full quantity of water to be transferred can be conveyed from the authorized source and applied at the authorized location and that the applicant is ready, willing, and able to exercise the right.*

This water system provides domestic water throughout the Fifth Addition of Klamath River Acres development and is supplied by 2 wells, see Exhibit B. Well #1 – Water is pumped from the well by a 10 horsepower, submersible turbine pump. Well #2 – Water is pumped

from the well by a 7 ½ horsepower, submersible turbine pump. From Well #1 water is conveyed through a 4" mainline from the well house 270' to T-1. From T-1 water is conveyed through 4" mainlines installed in both southeast and southwest directions. The southeast 4" main conveys water through 562' of pvc pipe to T-2, which is located at the intersection of White Goose Drive and Sprig Court. From T-2 a 4" main conveys water in a westerly direction into Sprig Court for a distance of 214' supplying homes before terminating. From T-2 water is also conveyed in a southerly direction through a 4" main 550' to T-3, which is located at the intersection of Cackler Court and White Goose Drive. From T-3 one 4" main conveys water in a southerly direction 1,191' and connects with well #2. This main conveys water to residents along White Goose Drive. From T-3 a 4" main conveys water in a westerly direction 667' servicing homes along Cackler Court to T-4, which is located along Keno –Worden County Road. From T-1, a 4" water main conveys water in a westerly then southwesterly direction 1330' before tying into T-4. From T-4, a 4" main conveys water in a southwesterly direction 600' to an upright 150,000 gallon storage reservoir. From the reservoir a 6" main conveys water approximately 30' to a pump house where the pressure is boosted by two 5 h.p. pumps before reducing to a 4" main. Water is then conveyed from the pump house in a westerly direction through a 4" main 351' to T-5. From T-5 water is conveyed through a 2" main continuing in a westerly direction along Whispering Pine Drive 281' distributing water to homes before terminating. From T-5 a 4" main conveys water in a northerly direction 710' to T-6. From T-6 a 4" main conveys water a total distance of 2,270', first north then northwesterly on Red Wing Loop Road, then south to Green Wing Loop, then east and northeast on Green Wing Loop Road and tying back into T-6. This system delivers water to residences on both Loop Roads. The entire water distribution system is constructed of 4" pvc pipe, except as noted above, with current connections to 96 homes located within the Fifth Addition of Klamath River Acres. A new homesite is under construction at this time and will represent the 97th home that utilizes this system. The water distribution system has been completely installed, with service lines that extend to all 115 lots within the subdivision.

- System capacity: 0.38 cubic feet per second (cfs). If the transfer involves multiple rights that have independent systems, describe the capacity for each system separately.
