Water Right Transfer Supplemental Form C INSTREAM WATER RIGHT TRANSFER

- Permanent Instream Transfer** or **Time-Limited Instream Transfer**
Please contact the Department with any questions on filling out this form. Attach additional pages, if necessary.

1. Identify the public use for which the instream right is requested (check one).

- Conservation, maintenance and enhancement of aquatic and fish life, wildlife, fish and wildlife habitat and other ecological values. Recreation
 Navigation
 Pollution Abatement

2. Instream use proposed to be created by the instream transfer:

Originating Water Right Number (as identified in the transfer application)	Priority Date	Source	Proposed Instream Period	Rate (cfs)*	Volume (ac-ft)**
C16201	1859	SARDINE CREEK	MARCH 1 TO OCT 31	0.17	82.47
C16201	1885	SARDINE CREEK	MARCH 1 TO OCT 31	0.77	37.11
Total Volume:					119.58

* To calculate rate (if other than the rate allowed by the right), divide the volume by the number of days in the period and then divide by 1.983471; or

** To calculate volume, multiply the rate by the number of days in the period and then multiply by 1.983471.

The quantity allocated during any period may not exceed the quantity that may be used under the existing right during that period. The total volume of water for the year may not exceed the total volume of water that may be used during the year under the existing right.

Additional information: COMPS FOR A FULL IRRIGATION SEASON CREEK ONLY HAS WATER ONE HALF OF THE YEAR

3. Identify the location of the proposed instream water right.

Water is requested to be protected at a point.
Location (i.e. the point of diversion (POD), or if the water right has more than one POD or if a POD is not described on the water right, please provide the legal description): _____

Water is requested to be protected within a reach.
Location of proposed reach (if an instream water right reach is requested, identify the upstream and downstream extent of the reach): Beginning at the POD for the Middle Ditch 360' N and 490' E of the W 1/4 of Sec 33 for a distance of 7800', POD is on the Right Fork of Sardine Creek.

4. Recommendations for conditions on the instream use to avoid taking away or impairing existing water rights.

- None
 Other (such conditions may include, but are not limited to, reductions in the instream flow levels in cfs per month or total ac-ft, the effective reach(es) or lake levels of the instream flow, measuring locations and the strategy for monitoring the instream flow or lake levels): _____

T 10978

5. Are there any existing instream water rights at the same point or within the same requested reach(es) or lake, or on a portion thereof:

- No Yes (identify other instream water rights): _____

New instream water rights generally (but not always) are additive to instream water rights established under ORS 537.348 (instream transfer application process) and ORS 537.470 (allocation of conserved water) and replace a portion of instream water rights established under ORS 537.341 (state agency application process) or ORS 537.346 (conversion of minimum perennial streamflows) with an earlier priority date.

Is it your intent to have the proposed instream water right transfer be additive to any instream water right established under ORS 537.348 and ORS 537.470 and replace a portion of any instream water right established under ORS 537.341 and ORS 537.346 with an earlier priority date?

- Yes No. If no, please explain your intent below.

If the proposed conversion would add to the amounts of an existing instream water right(s) established under ORS 537.341 or 537.346, provide documentation demonstrating why additional instream flows are necessary. *Supporting documentation should include information from the Dept. of Fish and Wildlife (ODFW) (fish life), Dept. of Environmental Quality (DEQ) (pollution abatement), and/or Parks and Recreation Dept. (recreation).*

6. Is the requested instream flow intended to exceed the estimated average natural flow or level occurring from the drainage system?

- No; *or*
 Yes (Provide supporting documentation that demonstrates why additional flows are significant for the public use requested.); *or*
 Yes, and it is presumed that flows that exceed the estimated average natural flow or natural lake levels are significant because:

- The requested flow does not exceed the maximum amount of any instream water right application applied for under ORS 537.341 (state agency instream water right application process) for the same reach or portion thereof, and the requested public use is for the same public use as the aforementioned instream water right application; ***and***
- For the specified time period that flows are requested to exceed the estimated average natural flow or lake level, the stream is in an ODFW flow restoration priority watershed (A copy of the priority watershed map indicating the specific watershed involved should be included with the application. Priority watershed maps may be found on the OWRD web page); ***or***
- The stream is listed as water quality limited and DEQ has provided scientific information that demonstrates that increased flows would improve water quality. (The scientific information provided by DEQ should be included with the transfer application.)

7. For a time-limited instream transfer, please answer the following:

- The time-limited instream transfer is for a specific number of years:
Begin Year n/a to End Year _____
- The time-limited instream transfer is to terminate based upon other conditions:
