- Check **all** proposed change(s) included in this transfer application:
 - Place of Use Point of Diversion (POD) Additional Point of Diversion
 - Character of Use Point of Appropriation (POA, or well) Additional POA
 - Instream Transfer Surface Water POD to Ground Water POA
 - Substitution of Supplemental Groundwater right for Primary Surface water right
 - Historic POD change Other

Reason(s) for change(s): Transferring forested, riparian, and other unsuitable sites from existing permit to other areas Dorena is currently or planning on utilizing as seedling and tree development for the facilities operational studies work.

5. WATER DELIVERY SYSTEM

- Describe the **current** water delivery system **or** the system that **was in place** at some time **within the last 5 years**. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. If the transfer involves multiple rights that have independent systems, describe each system separately.

The description must be sufficient to demonstrate that the full quantity of water to be transferred can be conveyed from the authorized source and applied at the authorized location and that the applicant is ready, willing, and able to exercise the right.

The pump is a Berkeley B2 1/2 ZPL with 8 7/8" impeller on a 30 HP motor. This is on a dedicated 3 phase meter running at 460 volts. This feeds a 6 inch main line running underground inside our fence line a distance of 3400 ft. parallel to Shoreview Road. This feeds 4 laterals of 4 inch diameter. Lateral 1 is 800 ft, Lateral 2 is 1100 ft., Lateral 3 is 2200 ft. and Lateral 4 is 1500 ft. Each lateral has 3 inch risers to the surface spaced as close as 100 ft. apart depending on the field layout. 3 inch hydrant valves feed 3 inch aluminium irrigation pipe with 5 gpm rain bird sprinklers on 24-36 inch risers at 30ft. spacing on the pipe. There are several thousand feet of aluminum pipe and enough rain birds to be able to run multiple sets and to keep the pump running 24 hours a day if the weather conditions require that much irrigation. A typical set will use around 50 - 60 rain birds and a large set will use up to 80 rain birds. The system can get up to 450 gpm in the lower elevation fields. The pump curve shows that it will deliver 350 gpm at its peak efficiency of 69% on the highest elevation ground.

- System capacity: 0.78-1.00 cubic feet per second (cfs). If the transfer involves multiple rights that have independent systems, describe the capacity for each system separately.
