RE; OWRD surface water permit S-55033 & S-55076

To whom it may concern,

The Oregon Department of Fish and Wildlife has reviewed documentation submitted by Parker Stanley, acting on behalf of Creekside Valley Farms, that shows a Clemons, ST-12 self-cleaning fish screen was installed at the point of diversion that is associated with surface water permits S-55033 and S-55076. This documentation was submitted virtually, and consisted of photographs of the diversion site along with copies of invoices of when the screen was purchased from the vendor. This original screen was purchased installed in April of 2017 and meets criteria up to a water withdrawal rate of 750 gallons per minute, or 1.67 cfs.

In March of 2019 the pump and the screen were both changed to different models. The fish screen that is currently in use at this site is a self-cleaning Clemons CW-1700. When installed and maintained properly, this end of pipe fish screen meets current State and Federal fish screening criteria for all age classes of anadromous salmonids up to a rate of 3 cfs, or 1347 gallons per minute. A by-pass pipe is not required with either type of screen mentioned above as they are both end of pipe screens.

Sincerely

Martin Olson
