Groundwater Application Review Summary Form

Application # G- <u>18532</u>

GW Reviewer <u>Joe Kemper</u> Date Review Completed: <u>8/29/2023</u>

Summary of GW Availability and Injury Review:

Groundwater for the proposed use is either over appropriated, will not likely be available in the amounts requested without injury to prior water rights, OR will not likely be available within the capacity of the groundwater resource per Section B of the attached review form.

Summary of Potential for Substantial Interference Review:

□ There is the potential for substantial interference per Section C of the attached review form.

Summary of Well Construction Assessment:

The well does not appear to meet current well construction standards per Section D of the attached review form. Route through Well Construction and Compliance Section.

This is only a summary. Documentation is attached and should be read thoroughly to understand the basis for determinations and for conditions that may be necessary for a permit (if one is issued).

WATER RESOURCES DEPARTMENT

MEMO

08/29/2023

TO: Application G- 18532

FROM: GW: <u>Joe Kemper</u> (Reviewer's Name)

SUBJECT: Scenic Waterway Interference Evaluation

- ✓ YES
 The source of appropriation is hydraulically connected to a State Scenic Waterway or its tributaries
- ✓ YES
 Use the Scenic Waterway Condition (Condition 7J)
 □ NO
- Per ORS 390.835, the Groundwater Section is **able** to calculate ground water interference with surface water that contributes to a Scenic Waterway. The calculated interference is distributed below
- Per ORS 390.835, the Groundwater Section is **unable** to calculate ground water interference with surface water that contributes to a scenic waterway; **therefore**, **the Department is unable to find that there is a preponderance of evidence that the proposed use will measurably reduce the surface water flows necessary to maintain the free-flowing character of a scenic waterway**

DISTRIBUTION OF INTERFERENCE

Calculate the percentage of consumptive use by month and fill in the table below. If interference cannot be calculated, per criteria in 390.835, do not fill in the table but check the "unable" option above, thus informing Water Rights that the Department is unable to make a Preponderance of Evidence finding.

Exercise of this permit is calculated to reduce monthly flows in <u>Rogue</u> Scenic Waterway by the following amounts expressed as a proportion of the consumptive use by which surface water flow is reduced.

PUBLIC INTEREST REVIEW FOR GROUNDWATER APPLICATIONS

TO:	Water Rights Section		Date	8/29/2023					
FROM:	Groundwater Section	Joe Kemper							
		Reviewer's Name							
SUBJECT:	Application G- 18532	Supersedes review of	f <u>8/14/2028</u>						
		*		Date of Review(s)					
PUBLIC INTE	EREST PRESUMPTION; GROUND	VATER							
OAR 690-310-130 (1) The Department shall presume that a proposed groundwater use will ensure the preservation of the public									
welfare, safety and health as described in ORS 537.525. Department staff review groundwater applications under OAR 690-310-140									

to determine whether the presumption is established. OAR 690-310-140 allows the proposed use be modified or conditioned to meet the presumption criteria. This review is based upon available information and agency policies in place at the time of evaluation.

A. GENERAL INFORMATION: Applicant's Name: <u>BGE Properties LLC</u> County: <u>Jackson</u>

Applicant(s) seek(s) <u>0.0579</u> cfs from <u>1</u> well(s) in the <u>Rogue</u> Basin, A1.

Bear Creek subbasin

Proposed use <u>Supplemental Irrig. (21.8 acres)</u> Seasonality: <u>April 1st to Oct. 31st</u> A2.

A3. Well and aquifer data (attach and number logs for existing wells; mark proposed wells as such under logid):

B. GROUNDWATER AVAILABILITY CONSIDERATIONS, OAR 690-310-130, 400-010, 410-0070

- B1. **Based upon available data**, I have determined that <u>groundwater</u>* for the proposed use:
 - a. **is** over appropriated, **is not** over appropriated, *or* **cannot be determined to be** over appropriated during any period of the proposed use. * This finding is limited to the groundwater portion of the over-appropriation determination as prescribed in OAR 690-310-130;
 - b. **will not** *or* **will** likely be available in the amounts requested without injury to prior water rights. * This finding is limited to the groundwater portion of the injury determination as prescribed in OAR 690-310-130;
 - c. **will not** *or* **will** likely to be available within the capacity of the groundwater resource; or
 - d. **will, if properly conditioned**, avoid injury to existing groundwater rights or to the groundwater resource:
 - i. The permit should contain condition #(s) 7C (7-yr SWL); 7J; Medium water-use reporting
 - ii. The permit should be conditioned as indicated in item 2 below.
 - iii. The permit should contain special condition(s) as indicated in item 3 below;
- B2. a. Condition to allow groundwater production from no deeper than ______ ft. below land surface;
 - b. Condition to allow groundwater production from no shallower than ______ ft. below land surface;
 - c. Condition to allow groundwater production only from the groundwater reservoir between approximately ft. and ft. and ft. below land surface;
 - d. **Well reconstruction** is necessary to accomplish one or more of the above conditions. The problems that are likely to occur with this use and without reconstructing are cited below. Without reconstruction, I recommend withholding issuance of the permit until evidence of well reconstruction is filed with the Department and approved by the Groundwater Section.

Describe injury –as related to water availability– that is likely to occur without well reconstruction (interference w/ senior water rights, not within the capacity of the resource, etc):

B3. **Groundwater availability remarks:** The applicant's well would produce from a fractured bedrock aquifer system in metasedimentary units of the Applegate Group. Groundwater level measurements in adjacent observation wells do not show extensive year-on-year declines. Many wells in the fractured-rock aquifers in the Rogue basin located on topographic highs have shown declines in recent dry years, but the applicant's well sits at the transition to flat lowlands. There are no representative observation wells in the vicinity that show excessive declines. At this time, there is not a preponderance of evidence that the resource is over-appropriated.

There is moderate groundwater development to the northwest, but considering the requested rate and the nature of the aquifer (decomposed bedrock and local fracture systems), it is unlikely the proposed use will cause injury to senior users. There is a POA located less than 300 feet to the west (GR-2241), but it is located on the same tax lot. There is a likelihood of well-to-well interference, but because they have the same owner, this review does not consider the potential injury or interference to this particular POA.

C. GROUNDWATER/SURFACE WATER CONSIDERATIONS, OAR 690-09-040

C1. 690-09-040 (1): Evaluation of aquifer confinement:

Well	Aquifer or Proposed Aquifer	Confined	Unconfined
1	Fractured Bedrock of Applegate Group	\boxtimes	

Basis for aquifer confinement evaluation: The well log for Well 1 reports "first water" at 77 feet BLS and a SWL of 22 feet BLS, indicating confined conditions. Adjacent well logs report similar confined conditions.

C2. **690-09-040** (2) (3): Evaluation of distance to, and hydraulic connection with, surface water sources. All wells located a horizontal distance less than ¹/₄ mile from a surface water source that produce water from an unconfined aquifer shall be assumed to be hydraulically connected to the surface water source. Include in this table any streams located beyond one mile that are evaluated for PSI.

Well	SW #	Surface Water Name GW Elev ft msl		SW Elev ft msl	Distance (ft)	Hydraulically Connected? YES NO ASSUMED	Potential for Subst. Interfer. Assumed?
			it mor	it mor			YES NO
1	1	Jackson Creek	1604	1525	5550		
1	2	Griffin Creek	1604	1440	7125		

Basis for aquifer hydraulic connection evaluation: <u>GW elevations are higher than SW elevations, indicating that</u> groundwater is flowing towards, and discharging to, adjacent streams.

Note: the Medford Irrigation District reports that Daisy Creek does not flow consistently through summer months but carries water when used to convey appropriated water to downstream customers. As such, Daisy Creek is not considered in this review as a surface water source as per OAR 690-009.

Water Availability Basin the well(s) are located within: <u>GRIFFIN CR > BEAR CR - AT MOUTH</u>; PSI also evaluated for JACKSON CR > BEAR CR - AT MOUTH

C3a. **690-09-040** (4): Evaluation of stream impacts for <u>each well</u> that has been determined or assumed to be **hydraulically** connected and less than 1 mile from a surface water source. Limit evaluation to instream rights and minimum stream flows that are pertinent to that surface water source, and not lower SW sources to which the stream under evaluation is tributary. Compare the requested rate against the 1% of 80% *natural* flow for the pertinent Water Availability Basin (WAB). If Q is not distributed by well, use full rate for each well. Any checked 🖾 box indicates the well is assumed to have the potential to cause PSI.

Well	SW #	Well < ¼ mile?	Qw > 5 cfs?	Instream Water Right ID	Instream Water Right Q (cfs)	Qw > 1% ISWR?	80% Natural Flow (cfs)	Qw > 1% of 80% Natural Flow?	Interference @ 30 days (%)	Potential for Subst. Interfer. Assumed?

Page

5

C3b. **690-09-040** (4): Evaluation of stream impacts by total appropriation for all wells determined or assumed to be hydraulically connected and less than 1 mile from a surface water source. Complete only if Q is distributed among wells. Otherwise same evaluation and limitations apply as in C3a above.

SW #		Qw > 5 cfs?	Instream Water Right ID	Instream Water Right Q (cfs)	Qw > 1% ISWR?	80% Natural Flow (cfs)	Qw > 1% of 80% Natural Flow?	Interference @ 30 days (%)	Potential for Subst. Interfer. Assumed?		

Comments: There are no hydraulically connected surface water sources within 1 mile of the applicant's well.

C4a. 690-09-040 (5): Estimated impacts on hydraulically connected surface water sources greater than one mile as a

percentage of the proposed pumping rate. Limit evaluation to the effects that will occur up to one year after pumping begins. This table encompasses the considerations required by 09-040 (5)(a), (b), (c) and (d), which are not included on this form. Use additional sheets if calculated flows from more than one WAB are required.

(A) = total interference as CFS; (B) = WAB calculated natural flow at 80% exceed. as CFS; (C) = 1% of calculated natural flow at 80% exceed. as CFS; (D) = highlight the checkmark for each month where (A) is greater than (C); (E) = total interference divided by 80% flow as percentage.

Basis for impact evaluation: <u>Pumping effects on adjacent surface water sources are evaluated using the Hunt (2003) stream</u> depletion model with aquifer parameters representative of the local geology. Parameters and results for the closest well-surface water source combination are presented in Figure 4.

C4b. 690-09-040 (5) (b) The potential to impair or detrimentally affect the public interest is to be determined by the Water Rights Section.

C5. If properly conditioned, the surface water source(s) can be adequately protected from interference, and/or groundwater use under this permit can be regulated if it is found to substantially interfere with surface water:

i. \Box The permit should contain condition #(s)

ii. The permit should contain special condition(s) as indicated in "Remarks" below;

C6. SW / GW Remarks and Conditions: <u>The applicant's well would access an aquifer system that has been determined to be</u> <u>hydraulically connected to adjacent surface water sources.</u> The reviewer has not found a preponderance of evidence for the Potential for Substantial Interference (PSI) as per OAR 690-009.

Memo

To: Kristopher Byrd, Well Construction and Compliance Section Manager

From: Joel Jeffery, Well Construction Program Coordinator

Subject: Review of Water Right Application G-18532

Date: August 16, 2018

The attached application was forwarded to the Well Construction and Compliance Section by Water Rights. Joe Kemper reviewed the application. Please see Joe's Groundwater Review and the Well Log.

Applicant's Well #1 (JACK 62237): Based on a review of the Well Report, Applicant's Well #1 appears to protect the groundwater resource.

The construction of Applicants Well #1 may not satisfy hydraulic connection issues.
