Pump tests are intended to provide aquifer and well information for ground water resource characterization and to help solve well problems (OAR 690-217-0015(9)). A review of the test results indicates that there are one or more deficiencies (listed below) related to the requirements for pump tests outlined in OAR 690-217; however, it is likely that any re-testing would provide data of only marginal value in satisfying the intent of the rules.

- o An airline was used to measure water levels and the depth to water was less than 300 feet.
- o Airline accuracy was not verified with at least one water level measurement taken with an electric water level measuring tape.

Although this test is being approved for this well on the above listed permit(s), it is unlikely that the approval will carry forward onto any new permits. If a new permit is issued for this particular well that requires a pump test, you may be denied and will need to perform a new test.

Approved pump test letters will be digitally posted to the water right in WRIS; all other pump test letters will be mailed to permit holder.

Please contact me if you have any questions.

Sincerely,

Andrew Wentworth
