OWRD

Hello Mary-

The ODFW has reviewed application LL-1971 (Aaron Ward) with proposed use of Applegate Reservoir water in the Applegate River sub-basin. Riparian vegetation that is impacted from the placement of the pump in the Applegate River should be rehabilitated/replanted, and any streambank ground disturbance should be restored to natural conditions after pump removal. Any pump utilized for water withdrawals associated with this application needs to be equipped with a fish screen consistent with ODFW standards. The applicant needs to contact Josh Kelsey (541-826-8774) to discuss ODFW screen approval.

Please let me know if you have any questions/concerns and thank you for the opportunity to comment.

Best-

jason
