Re: Application G-19177

Our client, Joshua and Katherine McBee received the Initial Review (IR) for Application G-19177 on June 28, 2024 with a determination to deny. The application was placed on Administrative Hold until August 15, 2025 to evaluate their options.

As of today they have decided to choose Option 1 and reduce the requested rate to 0.0188 cfs.

Additional items were required:

1. Client needed to pay an additional \$290 fee by August 1, 2024
2. The application map needed revised with quarter quarter locations.

I do not know if the additional fees have been paid as of today, but if they have not, I hope they have until the extended hold time of August 15, 2025.

If the fee has been paid, then we would request the administrative hold be terminated so the review can proceed.

If the fee has not been paid, once OWRD receives fee, we will terminate the administrative hold to allow the application to proceed.

Attached are the revised application page and map.

SECTION 3: WELL DEVELOPMENT, continued

Total maximum rate requested: 0.0188 cfs (each well will be evaluated at the maximum rate unless you indicate well-specific rates and annual volumes in the table below).

Revised 4-14-25 DJT

The table below must be completed for each source to be evaluated or the application will be returned. If this is an existing well, the information may be found on the applicable well log. *(If a well log is available, please submit it in addition to completing the table.)* If this is a proposed well, or well-modification, consider consulting with a licensed well driller, geologist, or certified water right examiner to obtain the necessary information.

										PROPOSED USE

* Licensed drillers are required to attach a Department-supplied Well Tag, with a unique Well ID or Well Tag Number to all new or newly altered wells. Landowners can request a Well ID for existing wells that do not have one. The Well ID is intended to serve as a unique identification number for each well.

** A well log ID (e.g. MARI 1234) is assigned by the Department to each log in the agency's well log database. A separate well log is required for each subsequent alteration of the well.

*** Source aquifer examples: Troutdale Formation, gravel and sand, alluvium, basalt, bedrock, etc.
