Reservoir Dimensions and Capacity:

AVERAGE LENGTH	AVERAGE WIDTH	AVERAGE DEPTH	MAXIMUM CAPACITY IN ACRE-FEET
100 ft	45 ft	17 ft	1.76 acre-ft

To determine capacity in acre-feet use for the above table, use the following calculation:

$$\text{Acre-feet} = \frac{(\text{Average Length})(\text{Average Width})(\text{Average Depth})}{43,560}$$

SECTION 3
MAP

Attach a map identifying the reservoir location. If the water right application map accurately reflects the location of the reservoir, you may attach a copy of it. Otherwise, you must submit a map meeting the standards of OAR 690-310-0050, which are attached.

Preparation of the map by a Certified Water Rights Examiner is **not** required for this type of permit, but may be submitted.

RE: Fish Screen and By-Pass Device Condition for Permit R-15649

To whom it may concern,

The Oregon Department of Fish and Wildlife (ODFW) is submitting this letter regarding the fish screen and by-pass device condition contained in permit R-15649 in the name of Elizabeth Harrison. The permit allows the water user to submit evidence in writing that ODFW has determined fish screens and/or by-pass devices are not necessary.

After inspection of the diversion location on the unnamed stream, tributary to Floras Creek, ODFW has determined that the point of diversion is situated above current and historical distribution of native migratory fish species and, therefore, fish screens and/or by-pass devices are not necessary for R-15649.

Although ODFW has determined that fish screens and/or by-pass devices are not necessary, the permittee shall not stock fish in the reservoir without first obtaining a Fish Transport Permit issued by the Oregon Department of Fish and Wildlife (ODFW). As part of the Fish Transport Permit process, the permittee may be required to screen the inlet and outlet of the reservoir to ensure that fish cannot escape into public waters and/or to keep wild fish from entering the reservoir.

Sincerely,

Laura Green
