E. Conservation

What methods will you use to conserve water? Why did you choose this distribution or application method? Have you considered other methods to transport, apply, distribute or use water? For example, if you are using sprinkler irrigation rather than drip irrigation, explain. If you need additional space, attach a separate sheet:

WATER RESOURCES DEPT
SALEM, OREGON**5. RESOURCE PROTECTION****A. Protection Practices**

In granting permission to use water from a stream or lake, the state encourages, and in some instances requires, careful control of activities that may affect the waterway or streamside area. See the instruction guide for a list of possible permit requirements from other agencies. Please indicate any of the practices you plan to undertake to protect water resources.

☒ Diversion will be screened to prevent uptake of fish and other aquatic life.

Describe planned actions: Sniption Creek and it tributaries only flows water for very short periods of time during the year. This occurs for 3 to 6 day periods during very hard spring rain storms or during periods of spring snow melt. The creek is dry the rest of the year except where our proposed reservoirs have caught theses 3 to 6 days of flows. Thus there are no fish or aquatic life except what we stock in a few of the reservoirs. Fish screens will be used to protect the fish.

☒ Excavation or clearing of banks will be kept to a minimum to protect riparian or streamside areas. Describe planned actions: The use of the water in the reservoirs will be used to establish vegetation and riparian areas to stop the erosion that now occurs when there is snow melt or a hard rain.

☒ Operating equipment in a water body will be managed and timed to prevent damage to aquatic life. Describe: The reservoirs and irrigation system will be installed at time when there is no snow melt or hard rains.

☐ Water quality will be protected by preventing erosion and run-off of waste or chemical products. Describe: The use of the water in the reservoirs will be used to establish vegetation and riparian areas to stop the erosion that now occurs when there is snow melt or a hard rain thus our efforts will improve water quality.

☐ Other: _____

6. PROJECT SCHEDULE

Indicate the anticipated dates that the following construction tasks should begin. If construction has already begun, or is completed, please indicate that date.

Proposed date construction will begin: Started
 Proposed date construction will be completed: Oct.1, 2015
 Proposed date beneficial water use will begin: Oct.1, 2015

7. REMARKS

If you would like to clarify any information you have provided in the application, please do so here and reference the specific application question you are addressing.

Accompanying this application is a Ground Water Application and a Reservoir Application. With these applications we propose to catch short periods of run off in reservoirs; supplement the water caught in the reservoirs with well water; irrigate crops that wildlife like, start and maintain riparian areas. This project will benefit fish and wildlife.

8. MAP REQUIREMENTS

The Department cannot process your application without accurate information showing the source of water and location of water use. You must include a map with this application form that clearly indicates the township, range, section and quarter/quarter section of the proposed points of diversion and place of use. The map must provide tax lot numbers. See the map guidelines sheet for detailed map specifications.

9. SIGNATURE

By my signature below, I confirm that I understand:

- I am asking to use water specifically as described in this application.
- Evaluation of this application will be based on information provided in the application packet.
- I cannot legally use water until the Water Resources Department issues a permit to me.
