ROU	ND WATER AVA	AILABILITY CONSIDERATIONS	S, OAR 690-310-130, 400-	<u>-010, 410-0070</u>
Ba	ased upon available	data, I have determined that ground wat	er* for the proposed use:	
a.	period of the p	priated, is not over appropriated, or proposed use. * This finding is limited to as prescribed in OAR 690-310-130;		
b.		will likely be available in the amounts the ground water portion of the injur		
c.	will not or	will likely to be available within the ca	apacity of the ground water re	source; or
d.	i. 🛚 The p ii. 🔲 The p	rly conditioned, avoid injury to existing permit should contain condition #(s)	N l in item 2 below.	
a.	Condition to	allow ground water production from no	deeper than	ft. below land surface;
b.	Condition to	allow ground water production from no	shallower than	ft. below land surface;
c.	Condition to water reservoi	allow ground water production only from the street results between approximately ft.	and ft. below la	ground ground surface;
d.	to occur with withholding is	ruction is necessary to accomplish one of this use and without reconstructing are consumer of the permit until evidence of well Water Section.	ited below. Without reconstru	uction, I recommend
		-as related to water availability- that is not within the capacity of the resource.		reconstruction (interference w/
La	ake basin. SOW #1	oility remarks: <u>Region Manager Ivan</u> 77 was dropped in the early 1990s, but ats for other nearby wells are not yet s	water levels were generally	stable. Permit condition

C3b. **690-09-040 (4):** Evaluation of stream impacts by total appropriation for all wells determined or assumed to be **hydraulically connected and less than 1 mile** from a surface water source. **Complete only if Q is distributed among wells.** Otherwise same evaluation and limitations apply as in C3a above.

SW #		Qw > 5 cfs?	Instream Water Right ID	Instream Water Right Q (cfs)	Qw > 1% ISWR?	80% Natural Flow (cfs)	Qw > 1% of 80% Natural Flow?	Interference @ 30 days (%)	Potential for Subst. Interfer. Assumed?				
Comments:	Comments: This section does not apply.												

Comments: This section does not apply.

C4a. **690-09-040 (5):** Estimated impacts on **hydraulically connected surface water sources greater than one mile** as a percentage of the proposed pumping rate. Limit evaluation to the effects that will occur up to one year after pumping begins. This table encompasses the considerations required by 09-040 (5)(a), (b), (c) and (d), which are not included on this form. Use additional sheets if calculated flows from more than one WAB are required.
