Hi Kerry,

As per our conversation on Jan. 27, I would like a meter placed on the pump at the Reservoir, with reporting a possibility in the future but not mandatory now, and a meter at the POD on the Applegate. We were told by Norm Daft that the meter is already in place at the POD on the Applegate River. Thanks
Kerry.

Subject: Application S-87641 Thomas and Vicky Van Saun

Hi Kathy,

The application proposed the use of 12 AF from Reservoir 1, to be constructed under Application R-87640, for irrigation, supplemental irrigation, and temperature control and the use of 40 AF from Applegate Reservoir for irrigation and supplemental irrigation. In the Initial Review, issued August 27, 2010, I used the "large" MRR condition which requires the installation of a totalizing flow meter or other suitable measuring device prior to use of water. It is our standard practice to require "large" for any application proposing temperature control or nursery.

Norm Daft, on behalf of the applicant, requested that the "large" MRR condition **not** be required for the diversion from Reservoir 1. Mr. Daft stated that he had discussed this with you and that you had agreed that a staff gage would suffice as the measuring device for Reservoir 1 – is this true?

Here is a link to the IR:

Thanks for your help!

Kerry
