B. GROUNDWATER AVAILABILITY CONSIDERATIONS, OAR 690-310-130, 400-010, 410-0070

| B1. | Based upon available data, I have determined that ground water* for the proposed use: | | | | | | | | | |
|-----|---|--|--|--|--|--|--|--|--|--|
| | a. | is over appropriated, ☐ is not over appropriated, or ☐ cannot be determined to be over appropriated during any period of the proposed use. * This finding is limited to the groundwater portion of the over-appropriation determination as prescribed in OAR 690-310-130; | | | | | | | | |
| | b. | \square will not or \square will likely be available in the amounts requested without injury to prior water rights. * This finding is limited to the groundwater portion of the injury determination as prescribed in OAR 690-310-130; | | | | | | | | |
| | c. | \square will not or \square will likely to be available within the capacity of the groundwater resource; or | | | | | | | | |
| | đ. | will, if properly conditioned, avoid injury to existing groundwater rights or to the groundwater resource: i. | | | | | | | | |
| B2. | a. | Condition to allow groundwater production from no deeper than ft. below land surface; | | | | | | | | |
| | b. | Condition to allow groundwater production from no shallower than ft. below land surface; | | | | | | | | |
| | c. | Condition to allow groundwater production only from the groundwater reservoir between approximately ft. and ft. below land surface; | | | | | | | | |
| | d. | ☐ Condition to allow production only from a single aquifer in the Columbia River Basalt groundwater reservoir; | | | | | | | | |
| | e. | ■ Well reconstruction is necessary to accomplish one or more of the above conditions. The problems that are likely to occur with this use and without reconstructing are cited below. Without reconstruction, I recommend withholding issuance of the permit until evidence of well reconstruction is filed with the Department and approved by the Groundwater Section. | | | | | | | | |
| | | Describe injury —as related to water availability— that is likely to occur without well reconstruction (interference w/ senior water rights, not within the capacity of the resource, etc): | | | | | | | | |
| В3. | Jan on o the leve with 195 | e applicant has requested a second POD with a proposed depth of 320 feet, 105 feet deeper than the existing well. | | | | | | | | |
| | It is dec | s not unusual for wells to encounter different aquifers with increasing depth in this area. There are substantial lines in some aquifers in this area. If a new well is constructed or the existing well is deepened, a different aquifer y be encountered. There is a well under construction about ½ mile south of the applicants (as of early February). E well is about 1000 feet deep without encountering water. | | | | | | | | |
| | | ll Construction Condition: Well #1 shall not be deepened into a different aquifer. Well #2 shall be completed in the ne aquifer as Well #1. | | | | | | | | |
| | 70 | e applicant requested an increase fro 10 gpm to 70 gpm. The original review found water available a 10 gpm. At gpm, considering the overall trend in groundwater levels in this area is down, the resource can not sustain the litional 60 gpm, | | | | | | | | |
| | | e applicant reduced the requested discharge rate to 0.068 cfs or 30. 5 gpm. | | | | | | | | |

C. GROUND WATER/SURFACE WATER CONSIDERATIONS, OAR 690-09-040

| C1. | 690-09-040 | (1): | Evaluation | of | aquifer | confinement: |
|-----|------------|------|------------|----|---------|--------------|
|-----|------------|------|------------|----|---------|--------------|

| Well | Aquifer or Proposed Aquifer | Confined | Unconfined |
|------|-----------------------------|-------------|------------|
| 1 | CRBG | | |
| 2 | CRBG | \boxtimes | |
| | 300 | | |
| | | | |
| | | | |

| Basis for aquifer confinement evaluation: | At WASC 3975, the groundwater level rose above where it was encountered |
|---|---|
| during drilling: therefore, the aquifer was | confined in 1979 when the well was constructed. |
| during dramag, theretore, the advance the | |

C2. 690-09-040 (2) (3): Evaluation of distance to, and hydraulic connection with, surface water sources. All wells located a horizontal distance less than 1/4 mile from a surface water source that produce water from an unconfined aquifer shall be assumed to be hydraulically connected to the surface water source. Include in this table any streams located beyond one mile that are evaluated for PSI.

| Well | SW # | Surface Water Name | GW Elev ft msl | SW Elev ft msl | Distance (ft) | Hydraulically Connected? YES NO ASSUMED | Potential for Subst. Interfer. Assumed? YES NO |
|------|---------|----------------------------|----------------------|----------------------|------------------|---|---|
| 1 | 1 | Larch & Rail Hollow creeks | | | | | |
| 2 | 1 | Larch & Rail Hollow creeks | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |

| Basis for aquifer hydraulic connection evaluation: All of the streams within one mile of the proposed development are |
|--|
| intermittent. Groundwater levels and the elevation of the aquifer are above nearby streams but the streams do not flow |
| during most of the year. |
| 9 |
| |
| Water Availability Basin the well(s) are located within: |

C3a. 690-09-040 (4): Evaluation of stream impacts for each well that has been determined or assumed to be hydraulically connected and less than 1 mile from a surface water source. Limit evaluation to instream rights and minimum stream flows that are pertinent to that surface water source, and not lower SW sources to which the stream under evaluation is tributary. Compare the requested rate against the 1% of 80% natural flow for the pertinent Water Availability Basin (WAB). If Q is not distributed by well, use full rate for each well. Any checked \(\subseteq \) box indicates the well is assumed to have the potential to cause PSI.

| Well | SW # | Well < ½ mile? | Qw > 5 cfs? | Instream Water Right ID | Instream Water Right Q (cfs) | Qw> 1% ISWR? | 80% Natural Flow (cfs) | Qw > 1% of 80% Natural Flow? | Interference @ 30 days (%) | Potential for Subst. Interfer. Assumed? |
|------|---------|----------------|-------------|----------------------------------|---------------------------------------|--------------------|---------------------------------|---------------------------------------|----------------------------------|--|
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | 4.000 | | | |
| | | | | | | | | | | |

Page

Date: August 1, 2011

C3b. 690-09-040 (4): Evaluation of stream impacts by total appropriation for all wells determined or assumed to be hydraulically connected and less than 1 mile from a surface water source. Complete only if Q is distributed among wells. Otherwise same

| SW # | Qw > 5 cfs? | Instream Water Right ID | Instream Water Right Q (cfs) | Qw > 1% ISWR? | 80% Natural Flow (cfs) | Qw > 1% of 80% Natural Flow? | Interference @ 30 days (%) | Potential for Subst. Interfer, Assumed? |
|---------|-------------|----------------------------------|------------------------------|---------------------|---------------------------------|---------------------------------------|----------------------------|--|
| | | | | | | | - LWA-LAND | |
| | | | | | | | | |

C4a. 690-09-040 (5): Estimated impacts on hydraulically connected surface water sources greater than one mile as a percentage of the proposed pumping rate. Limit evaluation to the effects that will occur up to one year after pumping begins. This table encompasses the considerations required by 09-040 (5)(a), (b), (c) and (d), which are not included on this form. Use additional sheets if calculated flows from more than one WAB are required.
