

**Oregon Water Resources Department  
Water Right Services Division**

Water Rights Application  
Number G-11258

**Final Order  
Extension of Time for Permit Number S-10400  
Permit Holder: City of Lafayette**

---

**Permit Information**

**Application File G-11258/ Permit G-10400**

Basin 2 – Willamette Basin / Watermaster District 16

Date of Priority: April 10, 1984

**Authorized Use of Water**

Source of Water:	A well within the Yamhill River Basin
Purpose or Use:	Municipal
Maximum Rate:	0.49 Cubic Feet per Second (CFS)

---

**Appeal Rights**

**This is a final order in other than a contested case.** This order is subject to judicial review under ORS 183.484. A request for judicial review must be filed within the 60 day time period specified by ORS 183.484(2). Pursuant to ORS 536.075 and OAR 137-004-0080 you may either file for judicial review, or petition the Director for reconsideration of this order. A petition for reconsideration may be granted or denied by the Director, and if no action is taken within 60 days following the date the petition was filed, the petition shall be deemed denied.

**Application History**

Permit G-10400 was issued by the Department on July 19, 1984. The permit called for completion of construction by October 1, 1985, and complete application of water to beneficial use by October 1, 1986. On December 23, 2003, the City of Lafayette submitted an application to the Department for an extension of time for Permit G-10400. In accordance with OAR 690-315-0050(2), on April 3, 2012, the Department issued a Proposed Final Order proposing to extend the time to complete construction to October 1, 2041, and to extend the time to fully apply water to beneficial use to October 1, 2041. The protest period closed May 18, 2012, in accordance with OAR 690-315-0060(1). No protest was filed.

The Department adopts and incorporates by reference the Proposed Final Order dated April 3, 2012.

At time of issuance of the Proposed Final Order the Department concluded that, based on the factors demonstrated by the applicant, the permit may be extended subject to the following conditions:

## CONDITIONS

1. **Municipal Use Extension Condition**

The use of any water beyond 0.15 cfs under Permit G-10400 is subject to this Municipal Use Extension Condition.

The water user shall develop a plan to monitor and report the impact of water use under Permit G-10400 on water levels within the aquifer that provides water to the permitted wells. The plan shall be submitted to the Department within one year of the date the Extension Order is issued and shall be subject to the approval of the Department. At a minimum, the plan shall include a program to periodically measure static water levels within the permitted wells or an adequate substitute such as water levels in nearby wells.

2. **Development Limitations**

Diversion of any water beyond 0.15 cfs under Permit G-10400 shall only be authorized upon issuance of a final order approving a Water Management and Conservation Plan(s) (WMCP) under OAR Chapter 690, Division 86 which grants access to water under this extended permit. The required WMCP shall be submitted to the Department within 3 years of an approved extension of time application. Use of water under Permit G-10400 must be consistent with this and subsequent WMCP's approved under OAR Chapter 690, Division 86 that are on file with the Department.

The deadline established in the Extension Final Order for submittal of a WMCP shall not relieve a permit holder of any existing or future requirement for submittal of a WMCP at an earlier date as established through other orders of the Department. A WMCP submitted to meet the requirements of this order may also meet the WMCP submittal requirements of other Department orders.

3. **Conditions to Maintain the Persistence of Listed Fish**

A. **Minimum Fish Flow Needs**

Minimum fish flow needs in the Yamhill River as recommended by ODFW are in Table 1, below; flows are to be measured in the Yamhill River at Lafayette, Oregon (USGS Gage Number 14197500, or its equivalent).

**Table 1**

<b>ODFW'S RECOMMENDED MINIMUM FISH FLOW NEEDS IN THE YAMHILL RIVER</b>	
<b>MEASURED USGS GAGE 14197500, YAMHILL RIVER AT LAFAYETTE, OREGON</b>	
Month	Cubic Feet per Second
October	60
November – May	90
June	80
July	60
August - September	31

**B. Determining Water Use Reductions - Generally**

The undeveloped portion of Permit G-10400 having PSI with the Yamhill River is 0.06 cfs. The maximum amount of the undeveloped portion of Permit G-10400 having PSI with the Yamhill River that can be appropriated as a result of this fish persistence condition is determined in proportion to the amount by which the flows shown in Table 1 are missed based on a seven day rolling average of mean daily flows measured in the Yamhill River at Lafayette (USGS Gage Number 14197500, or its equivalent). The percent of missed target flows is defined as:

$$(1 - (Q_A / Q_T)) \times 100\%$$

where  $Q_A$  is the actual flow measured at the designated gage based on the seven day rolling average, and  $Q_T$  is the target flow (from Table 1).

The percent missed target flows applied to the undeveloped portion of this permit having PSI with the Yamhill River provides the maximum amount of water that could be appropriated under this permit as a result of this fish persistence condition, and is defined as:

$$E_{PSI} - (E_{PSI} \times \% \text{ missed target flows}),$$

where  $E_{PSI}$  is undeveloped portion of the permit as of this extension having PSI with the Yamhill River, being 0.06 cfs.

The maximum amount of undeveloped water that can be appropriated as a result of this fish persistence condition may be adjusted by a Consumptive Use Percentage, when applicable, as per Item 3.C., below.

C. Consumptive Use Percentages

a. Initial Consumptive Use Percentages

The City of Lafayette has not identified any Consumptive Use Percentages based on the return of flows to the Yamhill River through effluent discharge. Thus, at this time the City may not utilize Consumptive Use Percentages for the purpose of calculating the maximum amount of the undeveloped portion of Permit G-10400 that can be appropriated as a result of this fish persistence condition.

b. First Time Utilization of Consumptive Use Percentages

Utilization of Consumptive Use Percentages for the purpose of calculating the maximum amount of the undeveloped portion of Permit G-10400 that can be appropriated as a result of this fish persistence condition may begin after the issuance of the Final Order for this extension of time.

First time utilization of Consumptive Use Percentages is contingent upon the City (1) providing evidence in writing that ODFW has determined that withdrawal points and effluent discharges are within reasonable proximity to each other, such that fish habitat between the two points is not impacted significantly, and (2) submitting monthly Consumptive Use Percentages and receiving the Water Resources Director's concurrence with the proposed Consumptive Use Percentages. Utilization of Consumptive Use Percentages is subject to an approval period described in 3.C.f., below.

Consumptive Use Percentages submitted to the Department for review must (1) be specified as a percentage (may be to the nearest 1/10 percent) for each month of the year and (2) include a description and justification of the methods utilized to determine the percentages. The proposed Consumptive Use Percentages should be submitted on the *Consumptive Use Percentages Update Form* provided with the Final Order for this extension of time.

c. Consumptive Use Percentages Updates

Continuing the utilization of Consumptive Use Percentages for the purpose of calculating the maximum amount of the undeveloped portion of Permit G-10400 that can be appropriated as a result of this fish persistence condition beyond an approval period (as described in 3.C.f., below) is contingent upon the City submitting updated Consumptive Use Percentages and receiving the Water Resources Director's concurrence with the proposed Consumptive Use Percentages Updates. Utilization of Consumptive Use Percentages Updates is subject to an approval period described in 3.C.f., below.

The updates to the Consumptive Use Percentages must (1) be specified as a percentage (may be to the nearest 1/10 percent) for each month of the year and (2) include a description and justification of the methods utilized to determine the percentages. The updates should be submitted on the *Consumptive Use Percentages Update Form* provided with the Final Order for this extension of time.

d. Changes to Wastewater Technology and/or Wastewater Treatment Plant Practices

If there are changes to either wastewater technology or the practices at the City's wastewater treatment facility resulting in 25% or more reductions in average monthly return flows to the Yamhill River, then the Consumptive Use Percentages in effect at that time may no longer be utilized for the purposes of calculating the maximum amount of the undeveloped portion of Permit G-10400 that can be appropriated as a result of this fish persistence condition. The 25% reduction is based on a 10-year rolling average of monthly wastewater return flows to the Yamhill River as compared to the average monthly wastewater return flows from the 10 year period just prior to date of the first approval period described in 3.C.f., below.

If such changes to either wastewater technology or the practices at the City's wastewater treatment facility occur resulting in 25% reductions, further utilization of Consumptive Use Percentages is contingent upon the City submitting Consumptive Use Percentages Updates as per 3.C.c., above, and receiving the Water Resources Director's concurrence with the proposed Consumptive Use Percentages.

e. Relocation of the Point(s) of Diversion(s) and/or Return Flows

If the point(s) of diversion(s) and/or return flows are relocated, Consumptive Use Percentages in effect at that time may no longer be utilized for the purposes of calculating the maximum amount of the undeveloped portion of Permit G-10400 that can be appropriated as a result of this fish persistence condition.

After relocation of the point(s) of diversion(s) and/or return flows, further utilization of Consumptive Use Percentages is contingent upon the City (1) providing evidence in writing that ODFW has determined that any relocated withdrawal points and effluent discharge points are within reasonable proximity to each other, such that fish habitat between the two points is not impacted significantly, and (2) submitting Consumptive Use

Percentages Updates as per 3.C.c., above, and receiving the Water Resources Director's concurrence with the proposed Consumptive Use Percentages.

f. Approval Periods for Utilization of Consumptive Use Percentages

The utilization of Consumptive Use Percentages for the purpose of calculating the maximum amount of the undeveloped portion of Permit G-10400 that can be appropriated as a result of this fish persistence condition may continue for a 10 year approval period that begins 10 years from the Water Resources Director's most recent date of concurrence with Consumptive Use Percentages Updates as evidenced by the record, unless sections 3.C.d., or 3.C.e. (above) are applicable.

Consumptive Use Percentages (first time utilization or updates) which are submitted and receive the Director's concurrence will begin a new 10 year

approval period. The approval period begins on the date of the Water Resources Director's concurrence with Consumptive Use Percentages Updates, as evidenced by the record. The City at its discretion may submit updates prior to the end of an approval period.

D. Examples

Example 1: Target flow met.

On July 15, the last seven mean daily flows were 59, 60, 62, 62, 63, 63 and 62 cfs. The seven day rolling average (QA) is 61.5 cfs. The amount of the undeveloped portion of the permit having PSI with the Yamhill River that can be appropriated would not be reduced because the 7 day average of mean daily flows is greater than the 60 cfs target flows (QT) for July 15.

Example 2: Target flow missed.

Step 1: If on July 15, the average of the last seven mean daily flows was 32 cfs, and the target flow is 60 cfs, then the target flow would be missed by 53.3%.

$$(1 - (32 / 60)) \times 100\% = 53.3\%$$

Step 2: Assuming the Consumptive Use Percentage is 78.7%<sup>1</sup> during the month of July and the utilization of this percentage is authorized, and the target flow is missed by 53.3% (from Step 1), then the amount of the undeveloped portion of the permit having PSI with the Yamhill River that could be appropriated would be reduced by 41.9%.

$$(78.7\% \times 53.3\%) / 100 = 41.9\%$$

(If adjustments are not to be made by a Consumptive Use Percentage, then the undeveloped portion of the permit having PSI with the Yamhill River would only be reduced by the % by which the target flow is missed – 53.3% in this example).

Step 3: The undeveloped portion of this permit having PSI with the Yamhill River ( $E_{PSI}$ ) is 0.06 cfs. Therefore, in this example, the maximum amount of the undeveloped portion of Permit G-10400 having PSI with the Yamhill River that can be appropriated as a result of this fish persistence condition is 0.03 cfs.

$$0.06 - ((0.06 \times 41.9\%) / 100) = 0.03$$

---

<sup>1</sup> Currently, the City of Lafayette may not utilize Consumptive Use Percentages for the purpose of calculating the amount of the undeveloped portion of Permit G-10400 that can be appropriated as a result of this fish persistence condition. The utilization of the Consumptive Use Percentage 78.7%<sup>1</sup> is only for illustrative purposes in this example.

Step 4: Given that the permitted quantity under this right is 0.49 cfs, the entire undeveloped portion is 0.34 cfs, and the undeveloped portion having PSI with the Yamhill River is 0.06 cfs: If the amount of water legally authorized for appropriation at a given point in time (for example, authorization provided through a WMCP) is 0.45 cfs, then only 0.02 cfs of undeveloped water having PSI with the Yamhill River would be used to satisfy the 0.45 cfs.

$$0.45 - ((0.49 - 0.34) + (0.34 - 0.06)) = 0.02$$

[Note: (0.49 - 0.34) equals the developed portion of the permit  
(0.34 - 0.06) equals the undeveloped portion of the permit not having PSI;]

In this example, the 0.02 cfs of undeveloped water having PSI with the Yamhill River is less than the 0.03 cfs maximum undeveloped portion of the permit having PSI with the Yamhill River (from Step 3) that can be appropriated as a result of this fish persistence condition. Therefore, there would be no required reduction in water use of the undeveloped portion under the permit.

Step 5: If the amount of water legally authorized for appropriation at a given point in time is 0.49 cfs, then 0.06 cfs of undeveloped water having PSI with the Yamhill River would be used to satisfy the 0.49 cfs.

$$0.49 - ((0.49 - 0.34) + (0.34 - 0.06)) = 0.06$$

In this example, the 0.06 cfs of undeveloped water is greater than the 0.03 cfs maximum undeveloped portion having PSI with the Yamhill (from Step 3) that can be appropriated as a result of this fish persistence condition. Therefore, the amount of undeveloped water (having PSI with the Yamhill River) appropriated would need to be reduced by 0.03 cfs.

$$0.06 - 0.03 = 0.03$$

In this example, the maximum amount of water that could be appropriated is 0.46 cfs.

$$0.49 - 0.03 = 0.46$$

E. Relocation of the Point(s) of Appropriation (s) and New Quantification of PSI.

Any relocation of the point(s) of appropriation(s) through a permit amendment or transfer process will require a new OWRD ground water review pursuant to OAR Chapter 690 Division 9 to determine if use of water at the relocated point(s) of appropriation(s) has the potential for substantial interference (PSI) with surface water. This review will be used to quantify a new value for  $E_{PSI}$ , being the

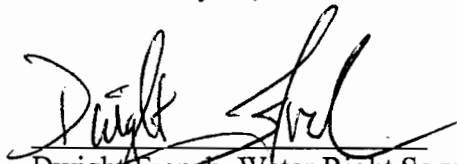

undeveloped portion of the permit as of this extension having PSI with the surface water based on the new locations of the point(s) of appropriation(s). The new value for  $E_{PSI}$  will be then utilized in the calculations for determining the maximum amount of water that could be appropriated under this permit as a result of this fish persistence condition.

The applicant has demonstrated good cause for the permit extension pursuant to ORS 537.630, 539.010(5) and OAR 690-315-0080(3).

Order

The extension of time for Application G-11258, Permit G-10400, therefore, is approved subject to conditions contained herein. The deadline for completing construction is extended from October 1, 1995 to October 1, 2041. The deadline for applying water to full beneficial use within the terms and conditions of the permit is extended from October 1, 1995 to October 1, 2041.

DATED: May 24, 2012

Dwight French, Water Right Services Division Administrator for  
PHILLIP C. WARD, DIRECTOR

# "Consumptive Use Percentages" Update Form

## TO THE WATER RIGHTS ADMINISTRATOR OF THE OREGON WATER RESOURCES DEPARTMENT

Re: **Fish Persistence Condition Applicable to:**  
**G-11257 / Permit G-10399**  
**Permit Holder: City of Lafayette**

### "Consumptive Use Percentages" Updates

- For each month listed below, provide the consumptive use percentage for the purpose of calculating the maximum total amount of the undeveloped portion of Permit G-10399 that can be diverted as a result of the fish persistence condition on the extension Final Order Dated May 24, 2012.

Month	Consumptive Use Percentage	Month	Consumptive Use Percentage
January	%	July	%
February	%	August	%
March	%	September	%
April	%	October	%
May	%	November	%
June	%	December	%

- Provide a description and justification of the methods utilized to determine the percentages. Please attach additional pages as necessary.
- The use of these "Consumptive Use Percentages" for the purposes stated above may continue for a 10 year approval period unless further utilization of Consumptive Use Percentages is contingent upon the City submitting Consumptive Use Percentages Updates due to changes in wastewater technology and/or the wastewater treatment plant or due to relocation of the point(s) of diversion(s) and/or return flows.
