One acre-foot is the volume of water that would cover one acre with one foot of water. To find out how much water your pond stores, multiply the surface area by the average depth. This will give you a rough estimate of cubic feet. One acre-foot equals 43,560 cubic feet. To be eligible to apply under the expedited review process (HB 2376, 1995), your pond must store less than 400,752 cubic feet (43,560 X 9.2).
