Good Morning,

We have determined that this file has not made it to the office yet. So, Herb and I will keep an eye out for it. We will let you know who the caseworker is when he assigns them to the file.

Thank you,  
Jonnine Skaug

Jonnine,  
Can you tell me and Mike Ladd who the caseworker will be? The only way I know how is to find the file in data center and see who it is assigned to.  
Thanks,  
Dwight

A Mr. Boyd Gatfield sent in a GW application on Dec. 29, 2006, to Salem. His request is for irrigation from a well for 2.7 acres (primary) and 2.7 acres (supplemental). The location is T4N, R35E, section 2. Please let me know who you assign as the caseworker and application number so I can get some lead time on when they get close to the initial review. Sometimes the applicant as to go out of state and is gone for up to two weeks at a time.

I would hate for him not to have the opportunity to stop the processing of the application (if he needs to) because he is out of state.

Thank you.

Thank you for your quick div. 09 look at UMAT 55584. I appreciate it.  
(Thank you also Doug) I have called the landowner and left him a message to call me, so I can give him the information. I'm pretty sure the owner will file his GW application as he had planned.

Mike,

I looked at the well logs on file and nearby applications in the area of UMAT 55584. This log describes the only WBZ as 133 to 163 with a static of 1 foot below land surface. The seal is a near minimum 19 feet. The WBZ is within a much thicker lithologic description (50-163), which always raises some questions (Is the zone all water bearing or was the driller lazy and just under-reported changes in lithology?). Other logs in the area are split on whether shallower basalt zones are water bearing. If we take the log at face value, then the hydraulic connection is likely not at the very nearest reach of Dry Creek. If the well meets current standards and does not actually produce water from a shallower zone, an application for GW might skate without a finding of PSI, but I'd be a lot more confident if the well had a seal to a greater depth. However, it does fall into the Milton-Freewater 5-mile radius, which Doug told me to not worry about at this time. Let me know if you need more information, but I would recommend that the well owner go ahead and file.

Mike Zwart

Mike,

Doug asked me to handle your request for a quick-and-dirty Division 9 review of this well. I will handle it ASAP, but I am now working on Proposed Orders for Hale's and Ditchen in response to petitions for reconsideration. There may be time this week in between flurries of activity with the other work. I will call or e-mail you when I'm ready to talk about it.

Mike Zwart
