# B. GROUND WATER AVAILABILITY CONSIDERATIONS, OAR 690-310-130, 400-010, 410-0070

B1.	Based upon available data, I have determined that ground water* for the proposed use:										
	a.	is over appropriated, is not over appropriated, or annot be determined to be over appropriated during any period of the proposed use. * This finding is limited to the ground water portion of the over-appropriation determination as prescribed in OAR 690-310-130;									
	b.	will not or will likely be available in the amounts requested without injury to prior water rights. * This finding is limited to the ground water portion of the injury determination as prescribed in OAR 690-310-130;									
	c.	$\square$ will not or $\square$ will likely to be available within the capacity of the ground water resource; or									
	d.	will, if properly conditioned, avoid injury to existing ground water rights or to the ground water resource:  i.									
B2.	a.	Condition to allow ground water production from no deeper than ft. below land surface;									
	b.	Condition to allow ground water production from no shallower than ft. below land surface;									
	c.	Condition to allow ground water production only from the ground water reservoir between approximately ft. and ft. below land surface;									
	d.	Well reconstruction is necessary to accomplish one or more of the above conditions. The problems that are likely to occur with this use and without reconstructing are cited below. Without reconstruction, I recommend withholding issuance of the permit until evidence of well reconstruction is filed with the Department and approved by the Ground Water Section.									
		<b>Describe injury</b> – as related to water availability – that is likely to occur without well reconstruction (interference w/ senior water rights, not within the capacity of the resource, etc):									
В3.	8, 9 and bee gro	bund water availability remarks: Well density is quite low in the area, only about 22 water wells of record in sections 0, 16, and 17. The water table occurs at shallow depths (generally < 10' BLS) and the total thickness of productive sands a gravels of the Lebanon alluvial fan is greater than 100 feet. There are a few wells in the township-range area that have in reporting water levels for the past >10 years (see graph) and these wells show no obvious signs of recent or past undwater level declines. The lack of obvious declines, the low well density, and the thickness of the aquifer suggest that aquifer can sustain further appropriation without injury to prior groundwater rights or to the groundwater resource.									

Date: 06/16/2014

#### C. GROUND WATER/SURFACE WATER CONSIDERATIONS, OAR 690-09-040

C1. **690-09-040** (1): Evaluation of aquifer confinement:

Well	Aquifer or Proposed Aquifer	Confined	Unconfined
1	Alluvium – Lebanon Fan	$\boxtimes$	
2	Alluvium – Lebanon Fan		
3	Alluvium – Lebanon Fan		
4	Alluvium – Lebanon Fan		

Basis for aquifer confinement evaluation: Wells are proposed, but nearby wells (e.g., LINN 58774, LINN 58990, LINN 51469) report static water levels above water-bearing zones. Water-bearing zones are sand/gravel lenses interfingered with finer-grained sediment that may be locally confined/unconfined

C2. **690-09-040** (2) (3): Evaluation of distance to, and hydraulic connection with, surface water sources. All wells located a horizontal distance less than ¼ mile from a surface water source that produce water from an unconfined aquifer shall be assumed to be hydraulically connected to the surface water source. Include in this table any streams located beyond one mile that are evaluated for PSI.

Well	SW #	Surface Water Name  GW SW Elev Elev ft msl Pistance (ft)  Hydraulically Connected?  YES NO ASSUMED					Potential for Subst. Interfer. Assumed? YES NO		
			-						
			1						

Basis for aquifer hydraulic connection evaluation:	The nearest perennial surface water	r source, the Calapooia River, is
greater than 18000 ft from the proposed wells. PSI is a	nlikely at this distance.	

Water Availability Basin the well(s) are located within: Calapooia R > Willamette R - AB Mouth

C3a. 690-09-040 (4): Evaluation of stream impacts for each well that has been determined or assumed to be hydraulically connected and less than 1 mile from a surface water source. Limit evaluation to instream rights and minimum stream flows that are pertinent to that surface water source, and not lower SW sources to which the stream under evaluation is tributary. Compare the requested rate against the 1% of 80% natural flow for the pertinent Water Availability Basin (WAB). If Q is not distributed by well, use full rate for each well. Any checked box indicates the well is assumed to have the potential to cause PSI.

Well	SW #	Well < 1/4 mile?	Qw > 5 cfs?	Instream Water Right ID	Instream Water Right Q (cfs)	Qw > 1% ISWR?	80% Natural Flow (cfs)	Qw > 1% of 80% Natural Flow?	Interference @ 30 days (%)	Potential for Subst. Interfer. Assumed?
				-		<u> </u>		<del>                                     </del>		

Date: 06/16/2014

C3b. 690-09-040 (4): Evaluation of stream impacts by total appropriation for all wells determined or assumed to be hydraulically connected and less than 1 mile from a surface water source. Complete only if Q is distributed among wells. Otherwise same evaluation and limitations apply as in C3a above.

	ID	(cfs)	ISWR?	Flow (cfs)	Natural Flow?	(%)	Interfer. Assumed?
+							
				,			

C4a. 690-09-040 (5): Estimated impacts on hydraulically connected surface water sources greater than one mile as a percentage of the proposed pumping rate. Limit evaluation to the effects that will occur up to one year after pumping begins. This table encompasses the considerations required by 09-040 (5)(a), (b), (c) and (d), which are not included on this form. Use additional sheets if calculated flows from more than one WAB are required.

Non-Di	istributed	Wells

Interfer	ence CFS												
(A) = To	otal Interf.												
(B) = 80	% Nat. Q												
(C) = 1	% Nat. Q												
(D) = (	(A) > (C)							•		v.			
(E) = (A	/B) x 100	%	%	%	%	%	%	%	%	%	%	%	%

	(D) = highlight the checkmark for each month where (A) is greater than (C); (E) = total interference divided by 80% flow as percentage.  Basis for impact evaluation: Impacts to the Calapooia River were not evaluated since general experience indicates that seasonal impacts will not reach the threshold for PSI at that distance to the river.
C4b.	690-09-040 (5) (b) The potential to impair or detrimentally affect the public interest is to be determined by the Wate Rights Section.
	If properly conditioned, the surface water source(s) can be adequately protected from interference, and/or ground water use under this permit can be regulated if it is found to substantially interfere with surface water:  i. ☐ The permit should contain condition #(s)  ii. ☐ The permit should contain special condition(s) as indicated in "Remarks" below;  W/GW Remarks and Conditions

# D. WELL CONSTRUCTION, OAR 690-200

D1.	Well #:	Logid:
D2.	a.     b.   c.	VELL does not meet current well construction standards based upon:  review of the well log; field inspection by
D3.	a.     b.   c.	VELL construction deficiency:  constitutes a health threat under Division 200 rules;  commingles water from more than one ground water reservoir;  permits the loss of artesian head;  permits the de-watering of one or more ground water reservoirs;  other: (specify)
D4.	THE V	VELL construction deficiency is described as follows:
D5.	THE V	<ul> <li>WELL <ul> <li>a. □ was, or □ was not constructed according to the standards in effect at the time of original construction or most recent modification.</li> <li>b. □ I don't know if it met standards at the time of construction.</li> </ul> </li> <li>to the Enforcement Section. I recommend withholding issuance of the permit until evidence of well reconstruction with the Department and approved by the Enforcement Section and the Ground Water Section.</li> </ul>
TH		ON TO BE COMPLETED BY ENFORCEMENT PERSONNEL
D7.	Well co	onstruction deficiency has been corrected by the following actions:
	-	(Enforcement Section Signature)
D8.	☐ Route	to Water Rights Section (attach well reconstruction logs to this page).
