ODFW BIOLOGIST COMMENTS FOR HB 2153 CERTIFICATES HB 2376 NOTICES

MA) EE REGUEROES DEPL SALEM OPEGAN

Application # P-81286 Biologist's Name: Jerry Vogt Address: 1495 East Gregory Rd., Central Point Certificate # (If applicable) Phone: (541) 826-8774 **Attach additional sheets if necessary Please specify which reservoir(s)/ponds(s) the comments pertain to: Describe by name, number or Township Range Section and 1/4 1/4 if necessary. If comments refer to all reservoir listed please specify. Please provide enough informatio to accurately describe which reservoir the comment(s) pertain to. These comments refer to all seven ponds in T39S, R1E, Sec. 4. Does the reservoir/pond cause a detrimental impact to existing fishery resource. Specify which fishery resource and the evidence which supports that finding. Please describe for each reservoir listed above. If the water right and the supporting evidence are the same please indicate. These indicate. The fact of the water right and the supporting evidence are the same please indicate. This reservoir negatively impacts populations of coho salmon (a federally-listed threatened species), resident trout and steelhead in Ashland Creek and Bear Creek. The subject reservoir inhibits the movement of both adult and juvenile salmonids in Ashland Creek. In addition, withdrawals of water for this reservoir are contributing to high water temperatures in Bear Creek, a stream which appears on DEQ' 303 (d) list of water quality limited streams due to high summer water temperatures. These high water temperatures are limiting salmonid rearing habitat in Bear Creek
**Attach additional sheets if necessary Please specify which reservoir(s)/ponds(s) the comments pertain to: Describe by name, number or Township Range Section and 1/4 1/4 if necessary.
