RE: Limited License Application  
Our File No. 130945-220250

Dear Jerry:

Enclosed for filing on behalf of Willow Creek Dairy is an Application for Limited Water Use License with supporting documentation, including the required map, watermaster review and land use form. I will serve as the applicant's primary agent, and will coordinate with the applicant's consultant Bill Porfily as needed to address any questions or requests for information.

Please deduct the \$340.00 fee (\$280 base fee plus two additional points of appropriation at \$30 each) from Schwabe, Williamson & Wyatt's account with the Department.

The applicant proposes to use no more than a combined maximum of 644 gallons per minute and 1037 acre-feet per year under any combination of limited licenses issued pursuant to this application and application LL-1690. The applicant will work with the Oregon Water Resources Department to determine an appropriate allocation of short-term use under LL-1690 (alluvial source) and this application (basalt source), taking into consideration the applicant's water use needs and the need for protection of groundwater resources. The applicant also proposes mitigation as described in Attachment A to the application.

Pursuant to ORS 537.143(3), this letter serves as the applicant's 15-day notice to the Department in advance of using water under the limited license.

Thank you for your assistance.

Best regards,

Shonee D. Langford

I (We) make application for a Limited License to use or store the following described surface waters or groundwater - not otherwise exempt, or to use stored water of for a use of a short-term or fixed-duration:

- 1. SOURCE(S) OF WATER: 3 basalt wells a tributary of Columbia River
2. AMOUNT OF WATER to be diverted;
Maximum instantaneous rate (cubic feet or gallons per minute): 644 gallons per minute
Total volume (gallons or acre-feet): 1037 AF/yr (5185 AF over 5 yrs). If water is to be used from more than one source, give the quantity from each: N/A. The 3 basalt wells will pump water from the same source aquifer
3. INTENDED USE(S) OF WATER: (check all that apply)
[ ] Road construction or maintenance
[ ] General construction
[ ] Forestland and rangeland management; or
[X] Other: Agricultural water use to construct and operate a dairy
4. DESCRIPTION OF PROPOSED PROJECT: Include a description of the place of use as shown on the accompanying site map, the method of water diversion, the type of equipment to be used (including pump horsepower, if applicable), length and dimensions of supply ditches and pipelines:

SEE ATTACHED WELL LOGS AND ATTACHMENTS A AND B

- 5. PROJECT SCHEDULE: (List day, month, and year)
Date water use will begin: May 1, 2017
Date water use will be completed: 5 years from approval
Months of the year water would be diverted and used: Year round
If for other than irrigation from stored water, how and where will water be discharged after use:
SEE ATTACHMENT B

SIGNATURE of Applicant or Agent: Shonee Langford, Attorney
Date: 3/10/17

LL-1692

**PLEASE READ CAREFULLY**

**NOTE:** A completed water availability statement from the local watermaster, Land Use Information Form completed by the local Planning Department, fees and site map meeting the requirements of OAR 690-340-030 must accompany this request. The fee for this request is **\$280** for the first point of diversion plus **\$30** for each additional point of diversion. Please review the Department's fee schedule to view fees required to request a limited license for Aquifer Storage and Recovery testing purposes or for Artificial Groundwater Recharge testing purposes.

**Failure to provide any of the required information will result in return of your application.** The license, if granted, will not be issued or replaced by a new license for a period of more than five consecutive years. The license, if granted, will be subordinate to all other authorized uses that rely upon the same source, or water affected by the source, and may be revoked at any time it is determined the use causes injury to any other water right or minimum perennial streamflow.

If water source is well, well logs or adequate information for the Department to determine aquifer, well depth, well seal and open interval, etc. are required. The licensee shall indicate the intended aquifer. If for multiple wells, each map location shall be clearly tied to a well log.

If a limited license is approved, the licensee shall give notice to the Department (Watermaster) at least 15 days in advance of using the water under the Limited License and shall maintain a record of use. The record of use shall include, but need not be limited to, an estimate of the amount of water used, the period of use and the categories of beneficial use to which the water is applied. During the period of the Limited License, the record of use shall be available for review by the Department upon request.

*\*A summary of review criteria and procedures that are generally applicable to these applications is available at: <http://www.oregon.gov/owrd/pages/pubs/forms.aspx>*

---

**Mapping Requirements (OAR 690-340-0030):**

- (1) A request for a limited license shall be submitted on a form provided by the Water Resources Department, and shall be accompanied by the following:
  - a. A site map of reproducible quality, drawn to a standard, even scale of not less than 2 inches = 1 mile, showing:
    - i. The locations of all proposed points of diversion referenced by coordinates or by bearing and distance to the nearest established or projected public land survey corner;
    - ii. The general course of the source for the proposed use, if applicable;
    - iii. Other topographical features such as roads, streams, railroads, etc., which may be helpful in locating the diversion points in the field.

---

## NOTE TO APPLICANTS

**OWRD**

In order for your application to be processed by the Water Resources Department (WRD), this Land Use Information Form must be completed by a local government planning official in the jurisdiction(s) where your water right will be used and developed. The planning official may choose to complete the form while you wait, or return the receipt stub to you. Applications received by WRD without the Land Use Form or the receipt stub will be returned to you. Please be aware that your application will not be approved without land use approval.

**This form is NOT required if:**

- 1) Water is to be diverted, conveyed, and/or used only on federal lands; **OR**
- 2) The application is for a water right transfer, allocation of conserved water, exchange, permit amendment, or ground water registration modification, and **all** of the following apply:
  - a) The existing and proposed water use is located entirely within lands zoned for exclusive farm-use or within an irrigation district;
  - b) The application involves a change in place of use only;
  - c) The change does not involve the placement or modification of structures, including but not limited to water diversion, impoundment, distribution facilities, water wells and well houses; and
  - d) The application involves irrigation water uses only.

## NOTE TO LOCAL GOVERNMENTS

The person presenting the attached Land Use Information Form is applying for or modifying a water right. The Water Resources Department (WRD) requires its applicants to obtain land-use information to be sure the water rights do not result in land uses that are incompatible with your comprehensive plan. Please complete the form or detach the receipt stub and return it to the applicant for inclusion in their water right application. You will receive notice once the applicant formally submits his or her request to the WRD. The notice will give more information about WRD's water rights process and provide additional comment opportunities. You will have 30 days from the date of the notice to complete the land-use form and return it to the WRD. If no land-use information is received from you within that 30-day period, the WRD may presume the land use associated with the proposed water right is compatible with your comprehensive plan. Your attention to this request for information is greatly appreciated by the Water Resources Department. If you have any questions concerning this form, please contact the WRD's Customer Service Group at 503-986-0801.

## B. Description of Proposed Use

Type of application to be filed with the Water Resources Department:

- Permit to Use or Store Water   
  Water Right Transfer   
  Permit Amendment or Ground Water Registration Modification  
 Limited Water Use License   
  Allocation of Conserved Water   
  Exchange of Water

Source of water:  Reservoir/Pond     Ground Water     Surface Water (name) \_\_\_\_\_

Estimated quantity of water needed: 644 gpm     cubic feet per second     gallons per minute     acre-feet

Intended use of water:  Irrigation     Commercial     Industrial     Domestic for \_\_\_\_\_ household(s)  
 Municipal     Quasi-Municipal     Instream     Other Agricultural use to construct and operate a dairy

Briefly describe:

The applicant is requesting a limited license (temporary water use authorization) to use three alluvial wells to supply water for agricultural uses associated with construction and operation of a dairy.

**Note to applicant:** If the Land Use Information Form cannot be completed while you wait, please have a local government representative sign the receipt at the bottom of the next page and include it with the application filed with the Water Resources Department.

For Local Government Use Only

OWRD

The following section must be completed by a planning official from each county and city listed unless the project will be located entirely within the city limits. In that case, only the city planning agency must complete this form. This deals only with the local land-use plan. Do not include approval for activities such as building or grading permits.

Please check the appropriate box below and provide the requested information

- Land uses to be served by the proposed water uses (including proposed construction) are allowed outright or are not regulated by your comprehensive plan. Cite applicable ordinance section(s);
Land uses to be served by the proposed water uses (including proposed construction) involve discretionary land-use approvals as listed in the table below. (Please attach documentation of applicable land-use approvals which have already been obtained. Record of Action/land-use decision and accompanying findings are sufficient.) If approvals have been obtained but all appeal periods have not ended, check "Being pursued."

Table with 3 columns: Type of Land-Use Approval Needed, Cite Most Significant, Applicable Plan Policies & Ordinance Section References, and Land-Use Approval (Obtained, Denied, Being Pursued, Not Being Pursued).

Local governments are invited to express special land-use concerns or make recommendations to the Water Resources Department regarding this proposed use of water below, or on a separate sheet.

Empty rectangular box for local government comments.

WATER AVAILABILITY STATEMENT

OWRD

Name of Applicant: Willow Creek Spring Limited License Number: LL-1697  
*c/o May & Velle*

1. To your knowledge, has the stream or basin that is the source for this application ever been regulated for prior rights?

Yes  No

If yes, please explain:

*This proposed application is seeking water from the Ordinance Rosalt Critical Groundwater Area. The Ordinance CWA Order prohibits any new appropriation of groundwater with some exceptions.*

2. Based on your observations, would there be water available in the quantity and at the times needed to supply the use proposed by this application?

Yes  No  
*Refer to Groundwater Section for review. All may be possible to consider forbearance of 1037AF of Rosalt CWA water if available under existing water right to impound of this limited license.*

3. Do you observe this stream system during regular fieldwork?

Yes  No

If yes, what are your observations for the stream?

4. If the source is a well and if WRD were to determine that there is the potential for substantial interference with nearby surface water sources, would there still be ground water and surface water available during the time requested and in the amount requested without injury to existing water rights?

Yes  No  N/A *Depends on surface water source affected.*

What would you recommend for conditions on a limited license that may be issued approving this application?

*off the license were approved, Flowmeters on all POAs would be required. Monthly water use reporting to OWRD (including Watermaster). Certificates identified in application must be forged use. Owners of these certificates (Bosma) must agree to forbearance and*

5. Any other recommendations you would like to make? *applicant must provide signed agreement to OWRD.*

*Monitoring well required. Location and depth to be determined by Groundwater Section. Beginning flowmeter readings, serial numbers and power meter use needs to be reported for Bosma wells. Watermaster may check to ensure no use occurs.*

ATTACHMENT A -- BASALT WELLS

DESCRIPTION OF PROPOSED PROJECT/ REMARKS

OWRD

This limited license application requests authorization to use basalt groundwater for agricultural water use for construction and operation of a dairy. The applicant proposes to use three existing basalt wells. For well construction details, please see the attached well logs. The applicant is currently seeking permanent authorization to use the three existing wells for the purposes described in this application (Transfer T-12248). This application, in combination with limited license application LL-1690 (alluvial source), is intended to serve as a bridge to temporarily allow water use for construction and operation of a dairy until transfer T-12248 is approved.

The applicant recognizes that the proposed basalt wells are within the Ordnance Basalt Critical Groundwater Area and proposes to mitigate the short-term use through forbearance of use of the following water rights held by Sage Hollow Ranch, which are more fully described in the Preliminary Determination for Transfer T-12248: a total of 2.38 cubic feet per second (approximately 1068 gallons per minute) for irrigation of 503 acres under Certificates 49726, 49727, 55316 and 55317. The applicant intends to provide Sage Hollow Ranch's written confirmation of forbearance, in a form acceptable to the Department, before the proposed limited license is issued.

The applicant proposes to use no more than a combined maximum of 644 gallons per minute and 1037 acre-feet per year under any combination of limited licenses issued pursuant to this application and application LL-1690. The applicant will work with the Oregon Water Resources Department to determine an appropriate allocation of short-term use under LL-1690 (alluvial source) and this application (basalt source), taking into consideration the applicant's water use needs and the need for protection of groundwater resources.

**ATTACHMENT B -- BASALT WELLS**

**DISCHARGE OF WATER AFTER USE**

OWMP

The dairy will use clean water for cooling milk, cleaning milk equipment, and livestock drinking water. Clear water will be recycled for additional cleaning and livestock water. Dirty water will be recycled for washing pens. The generated wash water and manure stream will be sent to separating systems and then storage lagoons. Recycled lagoon water will be used for flushing the livestock barns. Solid manure and lagoon storage will be land applied according to the Animal Waste Management Plan (AWMP) on file with the Oregon Department of Agriculture (MA# 995129, AWMP# 15229).

This limited license application includes a copy of the AWMP together with a map showing the water system (pump stations, booster stations, irrigation clusters) that will be used for land application of dairy lagoon water.

## **ii Utilization**

The nutrient management goal is to apply all generated liquids and some solids on owned or managed cropland at agronomic rates and export some of the solids.

## **2. SPECIFIC DESCRIPTIONS AND CALCULATIONS**

### ***a. Description of Production Area and Land Application Location***

#### **i Aerial Photo and Topography**

Appendix A contains a Production Area Map showing an aerial photograph of the dairy site. Aerial photos and topography of the land application fields is located with the soils information in Appendix B.

#### **ii Site Soils**

Appendix B contains the USDA-Natural Resources Conservation Service soil maps for the farm location. The primary soils at the dairy site are Irrigon fine sandy loam, Quincy loamy fine sand, Royal loamy fine sand and Sagehill fine sandy loam. These sandy soils are well drained with no risk of flooding.

### ***b. Manure, Litter and Process Waste Volumes***

Estimates of manure and process waste water volumes assume that the dairy has 13,000 milk cows, 2,000 dry cows, 11,000 heifers and 4,000 calves. The specific values are located in the appendix and not included here in the text. This allows for changes in management without changing the text of this AWMP.

ORAWM spreadsheet version 4.9 was used to estimate solid and liquid volumes. A 150-day winter storage period covering October through February was chosen to accommodate the typical growing season of March through September. The required storage capacity will be determined based on the specific water use, manure production and site runoff.

#### **i Manure Volumes**

Manure volumes are based on the number milk cows, dry cows, heifers and calves and their respective average weights. It is assumed that all livestock will be confined all year.

#### **ii Bedding Volumes**

The dairy uses dry manure for bedding the milk cows. Straw bedding is used for the calves and also for the pens during wet winter conditions.

#### **iii Process and Wash Water Volumes**

Parlor water use includes cleaning the milk room floor, pipelines and other equipment. Pre cooler and chiller water is recycled for livestock drinking water and parlor wash water. Wash water amounts are based on planned operation at another dairy.

#### **iv Silage and Feed Processing Leachate**

Silage and commodities are stored on slabs and leachate is directed to the lagoon complex. Silage is also stored in Ag Bags without significant leachate.

**c. Contaminated Storm Water**

Runoff from the parlor, barn roofs, and open lots is directed and handled with the flush water system and flows into the lagoon complex. Runoff from the manure handling area drains into a separate runoff lagoon. No clean water diversions are anticipated. The dairy site is graded to prevent runoff water to enter the site.

**d. Nutrient Content of Manure, Litter and Process Waste**

The estimated nutrient content was based on ORAWM after storage losses are shown in Table 1.

**Table 1: Manure Nutrient Content**

Lagoon Water (#/1,000 gallons)			Solid Manure (#/ton)		
N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O	N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O
4.98	4.46	6.24	10.57	5.63	7.81

**e. Farm Nutrient Balance**

**i Nutrients Generated and Losses**

The ORAWM spreadsheet was used to estimated amount of nutrients generated and remaining after storage, application, and denitrification losses.

**ii NRCS Agronomy Techinal Note #26 and Phosphorous Index**

The Site Vulnerability Class has been determined to be LOW for all the fields but one. One field is MEDIUM. The nutrient calculations currently balance for nitrogen.

**iii Acreage Owned or Leased**

The farm was center pivots, then converted to hybrid poplar trees with drip irrigation, and now is being converted back to center pivots. The farm has about 5,900 irrigated acres. ORAWM was used to estimate the farm nutrient balance assuming some fields are double cropped, so the total irrigated acres in ORAWM may be more than 5,900 acres.

Based on the ORAWM nutrient calculations at the planned herd size, the acreage owned can utilize all the liquids generated and some of the solids. Some solid manure may need to be exported off the farm. The specific amount of manure exported will change based cropping patterns, yields and field soil test results.

**f. Application Schedule and Limitations**

**I Schedule of Applications and Methods**

Prior to field application, the owner will test the nutrient levels in both the lagoon and solid manure. The owner will continue to sample both the lagoon and solid manure in the spring, mid-summer and fall until the records consistently and reliably show the approximate nutrient content of the manure at each period.

Application of liquids and solids will be done during favorable climatic conditions and crop condition. Application of manure will be done at appropriate times of the year to utilize nutrients for high forage production. Solids and liquids may be applied when climatic conditions and cropping patterns allow.

RECEIVED

MAR 10 2017

OWRD

Stored liquids are pumped through the center pivots, big guns or shanked into the cropland. Slurry from settling cells is shanked or spread using a honey wagon and slurry wagons. Solid manure is applied using conventional end spreaders or side slingers.

#### **ii Application Limitations and Guidance**

The application limitations are:

1. All liquid and solid manure applications are applied at agronomic rates.
2. Manure will not be applied to saturated soil.
3. Manure will not be applied during any precipitation that is excessive enough to cause ponded water.
4. Solid manure intended for field applications, may only be temporarily stored on field corners or staging areas up to 4 months prior to application. Solid manure may not be stored in the field corners from November thru February, and cannot have any free draining moisture.

#### **iii Guidance for Winter Manure Applications**

Only apply manure during this time period if the following guidelines can be met. Call the ODA CAFO Program for guidance if a manure application is needed and the guidelines can't be met.

1. Apply manure only to actively growing crops such as pastures or cover crop.
2. Minimize application rates by using the maximum practical travel rates for the application equipment.
3. Maintain a 100 foot setback buffer distance from all down gradient surface ditches or ponds.
4. Do not apply during rainfall events that are expected to result in saturated soils or surface runoff.
5. Do not apply to saturated or flooded soil.
6. Do not apply to slopes greater than 5%.
7. Application of manure to frozen soil should be avoided if possible. Do the following guidelines if manure is applied to frozen soil.
  - a. Apply only enough manure to address storage limitations.
  - b. Minimize applications to 5 wet tons per acre or less for solids and 6,788 gallons (0.25 inches) per acre for liquids or slurry.
  - c. Apply to fields of established hay, pasture or fields containing at least 90% cover and the furthest from surface water sources.
  - d. Do not apply manure within 200 feet of surface water sources, drainage ditches, wells, or inlets to subsurface drainage systems.
  - e. Runoff control systems such as earthen dikes must be in place where applications are made to fields with slopes greater than 5%.

#### **iv Irrigation Water Management**

Application of irrigation water is managed relative to lagoon water applications to minimize leaching of soluble nutrients or runoff. The applications should not exceed the field capacity of the soil. Lagoon water applications will not satisfy crop water requirements. The majority of the crop water requirements will be satisfied using irrigation water. AgriMet will be used for estimating crop specific water requirements. Crop root zone, soil water holding capacity, and allowable depletion values will be those shown in AgriMet.

A local consulting firm provides weekly evapotranspiration (ET) estimates for each crop. The farm operates each pivot the hours per week necessary to meet the weekly ET estimates.

RECEIVED

MAR 10 2017

OWRD

***g. Animal Mortality Management***

Mortalities are hauled to the designated area approved by ODA for regular pickup by a rendering facility or hauled weekly to the landfill.

***h. Mechanical Operation and Maintenance***

The following identifies the general operation and maintenance procedures required to ensure proper function of each component of the manure handling facilities. The operator will contain all wastewater within the facilities.

***i Screen Separators***

The screens are operated and maintained according to the manufactures recommendations and procedures. In the event that the separators are not functioning properly, the manure stream is diverted to the settling cells.

Routine activities include maintaining the concrete pad and curbs such that all runoff and drainage is captured and directed towards the settling cells. Once a separated solids mound has been allowed to free drain of moisture, it is transported to the manure drying area. Any material hauled to crop ground is documented by recording number of loads, date, material, and destination.

***ii Settling Cells and Storage Lagoons***

Routine operations of the storage lagoon cells include monitoring the collected flush water flow into the settling cells. During the spring and throughout the summer months, the settling cell and storage lagoons are cleaned.

All foreign material such as tumbleweeds and other foreign debris will be removed from the lagoon cells and pipes. Promptly repair all leaks around valves, fittings, and pipelines. Eradicate or otherwise remove all rodents and/or burrowing animals that have or can potentially damage any part of the soil liner. Immediately repair any damage caused by their activity. Do not allow livestock access to the liner. Immediately repair any vandalism, vehicular or livestock damage.

***iii Manure Handling Areas***

Settled solids removed from the screen separators, settling cells or lagoons are dried and stockpiled for bedding. The grading needs to be maintained so that all runoff is contained within the manure drying area and directed to the storage lagoon.

***iv Irrigation Pipeline***

Pipeline routes and water line will be inspected periodically for leaks. Any leaks, damaged sprinklers and or broken pipes will be repaired and or replaced. The irrigation pipes will be flushed periodically to assure no sediment buildup in the lines. Water will be drained during cold weather to prevent frozen lines and possible breakage. Shut off valves will be inspected annually. Broken valves will be replaced.

***v Pumps***

Pump(s) will be operated and maintained according to manufacturer's manual. Liquids will be drained from pump during freezing weather. Pump will be inspected periodically to prevent debris from wrapping around the impeller. Broken lines will be replaced or repaired. Loose connections will be tightened. The agitators, pumps and electrical controls will be periodically

RECEIVED

MAR 10 2017

OWRD

inspected to ensure proper operation. In the event of a power failure generators will be used as backup power.

**vi Trough or Tank**

Watering facilities will be inspected periodically. Damaged facilities will be repaired. Float valves will be maintained in working order. Areas immediately around the facilities will be maintained in a stable condition.

**3. Record Keeping and Reporting**

***a. Manure and Soil Testing***

The nutrient content of all applied manure sources will be tested to determine the correct application rates to satisfy crop requirements. Samples will be taken at least once during the time it is to be used.

Liquid manure samples can be taken from the center pivot sprinklers during application or from the lagoon. Samples will be placed in a screw lid container and frozen prior to shipping unless shipment is to occur that day. Liquid manure tests will include total nitrogen (TKN), phosphorous (P) and potassium (K) at a minimum.

In the case of daily or frequent spreading of slurries or solid manure, samples will be taken over a representative period. In a manure solids pile, collect samples from a variety of locations. The samples will be placed in a non-leaking airtight container. The samples will be placed in a freezer until shipment unless shipment is to occur that day. Solid manure tests will include total nitrogen (TKN), phosphorous (P), potassium (K) and moisture content at a minimum.

Soil sampling will be conducted at the depths and frequency as specified in the NPDES permit.

Soil sampling will be required to monitor the nutrient balance of the fields. Nutrient planning will be based on soil tests. Each field will be tested in the fall of each year after harvest. Soils will be sampled with as many as 10-20 samples per field. The samples will be mixed and placed in a suitable container for shipping. If shipping is delayed, the sample will be frozen until shipment. Additional information for soil sampling protocol and interpretation can be found in the OSU Bulletins.

*The following documents provide protocols for testing: manure, litter and process waste water; measuring crop nutrient removals; soil testing to evaluate nutrient application and crop uptake, and calculating manure application rates.*

- PNW 570-E, Monitoring Soil Nutrients Using a Management Unit Approach
- E306, Manure Sampling & Analysis
- EM 8768, Calculating Dairy Manure Nutrient Application Rates.
- EM 8832-E, Post-harvest Soil Nitrate Testing for Manured Copping Systems West of the Cascades

***b. Inspections***

1. Daily inspections: water lines.

RECEIVED

MAR 10 2017

OWRD

2. Weekly inspection: storm water diversions, run-off diversions, waste transport, conveyance structures, storage structures, storage structure volumes.
3. Periodic inspections: equipment used for land application of manure liquids and/or solids when in use.
  - a. Center pivot sprinkler packages will be checked by using rain gauges to verify the pivot application charts are correct.
  - b. Slurry and solid manure equipment calibrations will be done according to EM 8768 listed previously.

**c. Record Keeping**

**i Record results of:**

1. Daily inspections.
2. Weekly inspections.
3. Periodic inspections.
4. Corrective actions taken, explain those not corrected.
5. Expected crop yields (if not in the plan).
6. Applications of manure, litter and process waste will be kept, including the date, location, and the amount of N and P applied during each application.
7. Weather conditions at the time of manure, litter or process water application and 24 hours before and after application.
8. Total amount of manure or wastewater transferred to other persons, including date and amount of each transfer and the name and address of each recipient.

**ii REPORTING TO OREGON DEPARTMENT OF AGRICULTURE (ODA):**

1. Any discharge will be reported orally to ODA within 24 hours. Within 5 days, a written statement describing this discharge will also be submitted to ODA.
2. The amount of manure, litter and process waste applied will be reported annually.
3. The amount of manure, litter and process waste exported will be reported annually.

**iii OPERATION REQUIREMENTS**

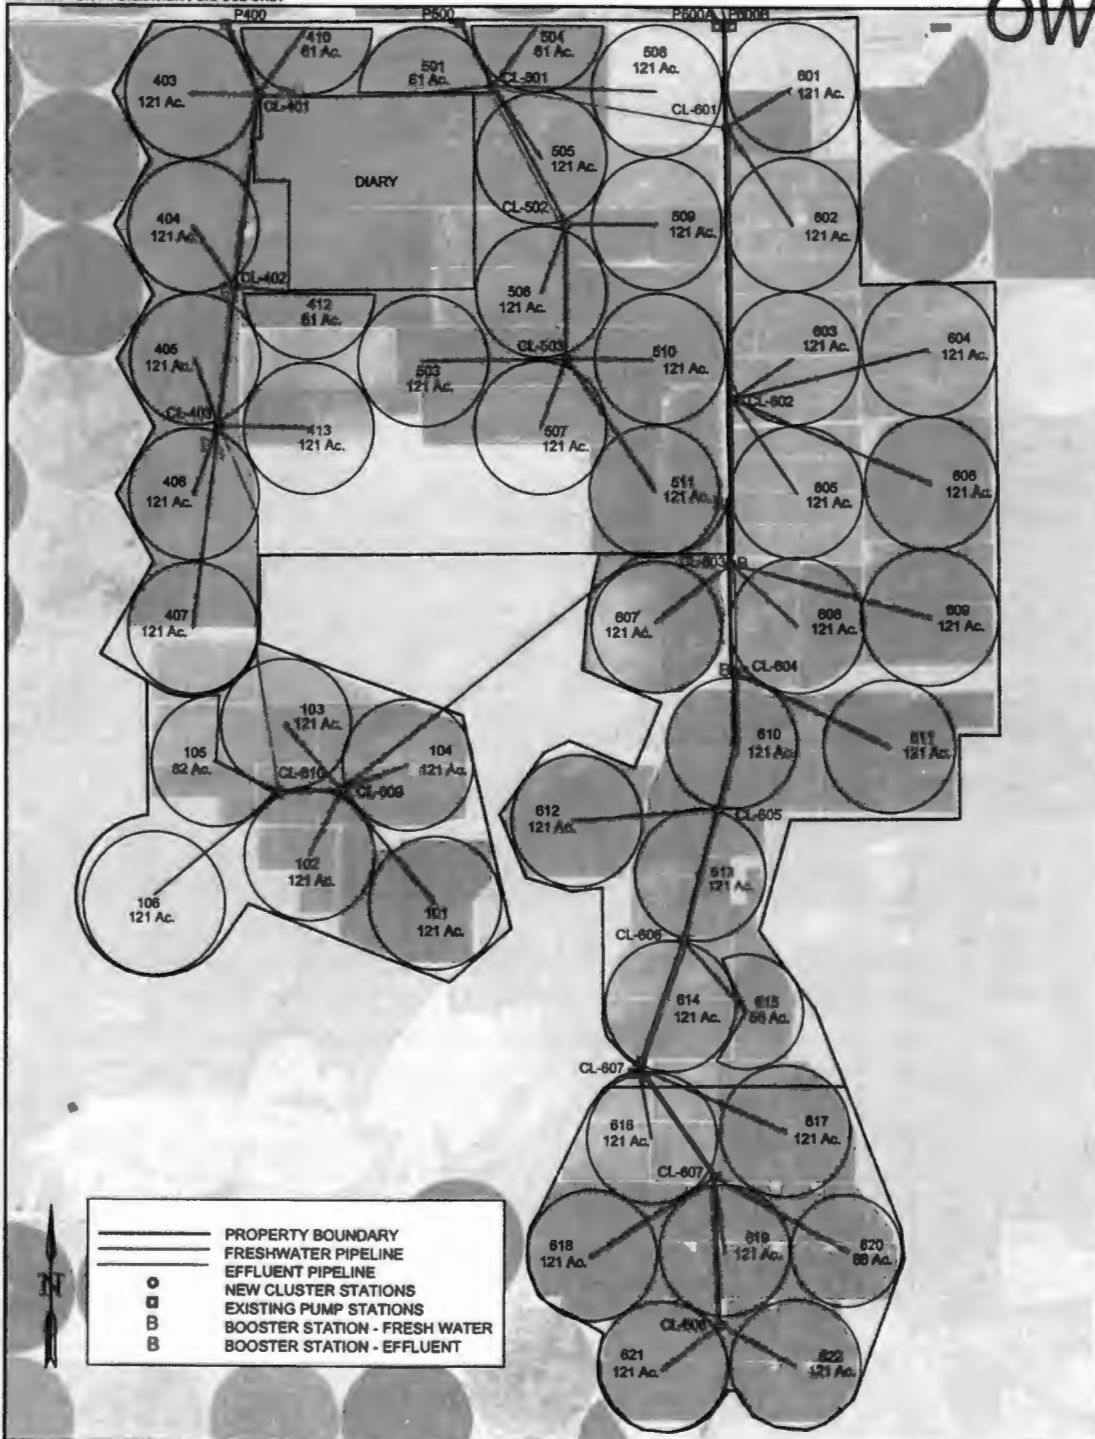

1. Must have depth markers in all surface liquid impoundments (i.e. lagoons, ponds, tanks). Markers must indicate:
  - a. Maximum design volume (freeboard).
  - b. Minimum capacity necessary to contain 25-year, 24 hours rainfall event.
  - c. Depth of manure and process wastewater.
2. Maintain setback area within 100 feet of any down gradient surface water, open tile line intake structure, sinkholes, agricultural wellheads, or other conduits to surface and ground waters where manure, litter, and other process wastewaters are prohibited. As a compliance alternative, and if demonstrated to the satisfaction of ODA, the permittee may:
  - a. Establish a 35 ft vegetated buffer where manure, litter and other process waste waters are prohibited: or
  - b. Demonstrate that a setback or vegetated buffer is not necessary or may be reduced.
