

WATERMASTER APPLICATION REVIEW

Application #: G-18697 Applicant's Name: Russel Young

- 1) Would the proposed allocation have the potential for injury to existing rights?
 Yes No

- 2) Have you spoken with persons from other state agencies about this application?
 Yes No If yes, whom and why?

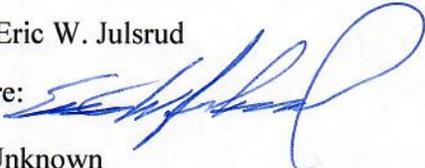

- 3) Please select the appropriate measurement, recording and reporting condition for this application.
 Small < 0.1 CFS, < 9.2 AF
 Medium > 0.1 CFS but < 0.25 CFS, > 9.2 AF but < 100 AF
 Large > 0.25 CFS, > 100 AF
 Require a staff gage if source is runoff or if the reservoir is located in-channel.

- 4) Please provide any additional information or conditions that you believe are necessary for this application.

I defer to the ground water section on the process for determining if this application can be approved. I do however feel that this application would likely not injure existing water rights in the area based upon field knowledge and experience. In my experience we have not seen an impact from any approved groundwater applications filed in this basin in the past 19 years. I do not believe this application would be any different in regards to impacts to other surface water sources in the vicinity. This application is to work in conjunction with Permit R-15278 to deliver water to the place of use. It is my request that if this permit is issued for this application that the following conditions be attached to the permit.

1. An in-line flow meter must be installed from the well to the reservoir.
2. An in-line flow meter must be installed from the well to the intended place of use.
3. A staff plate or slope gage must be installed within the reservoir to delineate the difference between groundwater and surface water.
