Norm and Clay,

Thanks for your patience. I have review your request for providing a limited description of the distribution system and water application system for this permit. Dwight agrees that the approval of a waiver is appropriate in this situation.

Based on the description you provided, once the water is diverted and discharged into reservoir 7, the remainder of the system used to distribute and apply the water to the use is a common system that has been previously described in reports for other perfected rights that encompass the entire place of use under the subject permit.

Because the common distribution and application system have been previously described, and because rate determination will focus on the diversion point from Johnson Creek, the request for a waiver is approved as requested.

Please attach a copy of this approval to the Claim. It may be helpful to reference the waiver in the portion of the Claim where these elements of the system would normally appear in the Claim.

Please let me know if you have any questions concerning this waiver approval.

Have a great afternoon!

Subject: COBU App S-70447 Permit S-54693

Gerry,

Clay Jordan, CWRE, asked that I contact you concerning the COBU for the above referenced permit.

ORS 537.230 (6) (a) & (b) indicates the Director may waive the requirement under (5) that the holder of the permit hire a CWRE. OAR 690-014-0100 (16) & 690-014-0110 (7) allow a CWRE to request exemptions to COBU report and map standards.

Cert 86397 (Permit G-12652) was issued as for cranberry operations for the same lands using the current distribution system. Other rights are Cert 54885 (Permit S-34284) and permit G-7778. All use the same delivery system to the bogs. 86397 covers all bogs while the other water rights cover all but two.

S-54693 is adding specific cranberry uses – flood, irrigation and temperature control, where not included in previous rights or during a different time of the year.

Clay and I have already visited the site and looked at the diversion works from Johnson Creek including the meter while the pump was operating. The owner indicated the delivery system to bogs is the same as other water rights.

We are proposing to prepare a map of the bogs and bulges in the system that includes the POD from Johnson Creek and mainline to the discharge at reservoir 7. The map will also show the location of the meter and fish screen. We propose that the report include calculations for the pump at Johnson Creek but we request an exemption from including auxiliary pumps, lateral pipelines and sprinklers as they are the same as the other water rights.

Specifically, Clay is requesting and exemption from including the following:

1. Listing and calculations for auxiliary pumps in reservoirs (bulges in system)
2. Listing and calculations for sprinklers
3. Listing of lateral pipelines and mainlines other than from Johnson Creek to reservoir 7.

Thanks for your consideration of this request.

Jeremiah,

Hope your week has been good. I have been working through the process with our regional ODFW water rights coordinator (Jason Brandt). The feedback I gave on the site inspection indicated that the withdrawal did not have a dam and would not need a fishway. Additionally, I noted that it was your understanding the intake was properly screened. This information along with files in OWRD should satisfy the process for the passage and screening feedback from ODFW to OWRD. Just for the files (not needed to keep your water right moving) we have been trying to obtain photos or actually observe screens when possible. If you pull up that Johnson Creek S-54693 water right intake at some point and can send me a picture or I can come down and take a picture of the screen on the intake, that would be great.
