

Basic Hydraulic Training

Course Description: Theory and principles of basic fluid power, it's control and uses.

Course Outline: The student will learn the nomenclature of design, components, and the effect of each on the operation and function of the system. Student will build three schematic designs. The student will be taught how to troubleshoot a system using a schematic. (1 day course)

Course Content 1 Day Seminar: Refresher designed course covers all the principles and fundamentals, component identification, ISO symbols, schematic design, CSI of Hydraulic troubleshooting.

Register no later than May 29, 2006.

Date: June 1, 2006
Location: U.S. Bearing & Drive
1033 SE Main Street
Portland, Oregon
Maximum: 15 students
Cost: \$165 for 1 day course
Contact: J. Eric Freimuth (503) 543-7791 or e-mail sales@htahydraulics.com

This course has been assigned eight (8) CECs by the Well Constructor Continuing Education Committee.
