After 3 months of good operations, the well suddenly would pump dry. Upon setting the rig up over the well, and attempting to remove the pump, the pump became locked into the liner thus raising liner and all. After removing all of the PVC liner and the pump it appeared that the PVC had shattered sometime after the pump was last installed. Therefore the decision was made to place 6 inch .250 wall well casing with 5 feet of perforations near the bottom in the well and try to place in as close to the granite in the bottom as possible. Thus protecting the well and the pump from further cave-ins from the softened shale.
