See attached log for Peter Kirk			

Note: Attempt was made to stop artesian flow above ground. A 20" casing was driven down 40' around original 10" casing. Backhoe dug down approximately 10' and 2' wide around 20" casing. Well was pumped to bring water level below 10' while ready-mix was poured from top. Flow was stopped and remained stopped for approximately two days whereupon water began seeping on the south side of the cement. Owner was to attempt to stop this smaller flow. Plate was welded between 20" and 10" casing to stop flow between casings.
