EXISTING Material From To SWL  
 WELL: 9.5" O.D. - 128' depth

PROBLEM: sand entrance with an increase in flow.

SOLUTION: install a homemade neoprene packer consisting of 6 - 8 3/8" I.D. irrigation pipe gaskets at the bottom of 8" liner. The sand was entering the well through openings in the casing from a sand layer not recorded as being exposed by perforating. The liner extends from ground level to 103.5'. Several pump tests were done to monitor effectiveness of the packer.
