(10) STATIC WATER LEVEL: 35 ft. below land surface. Date 5-20-99 Artesian pressure lb. per square inch. Date

(11) WATER BEARING ZONES: Table with columns: From, To, Estimated Flow Rate, SWL. Includes handwritten 'N/A' across the table.

(12) WELL LOG: Ground Elevation

Material From To SWL OBJECTIVE: To isolate 2 - aquifers, one shallow aquifer in sand + gravel from a basalt aquifer in a 10" well. PROCEDURE: 14 sacks of cement were mixed w/ water at the ratio of 1 sack / 5, 5gals of water. This mix yielded 140 gals which was pumped to the 200' level (202' as measured) where the 10" hole was bridged with fine-crushed gravel. The cement level stabilized at approximately 165'. The grout pipe was removed, the hole capped + water put into the 8" from 35' to 12'. Air pressure forced the water to 35' to 12' + pushing the cement from 165' up to at least the bottom of pipe perforations at 120'. 8" pipe was installed w/ center guides from 11.5 to 201' prior to cementing. Date started MAY 5, 1999 Completed MAY 20, 1999
