Final proof survey, 4/11/1973 indicates that well is 240 feet deep with a depth to water of 60 feet (both per information provided by owner). The USGS reported 8-inch casing observed during a site visit on 8/17/1978. Form C indicates complete application of water on 7/2/1972. Therefore, the well was probably drilled in 1971, 1972, or 1973.			
If the reported depth is correct, and if the well is cased to 50 or 60 feet, production is likely from water-bearing zones in the Columbia River Basalt Group.			
No water well report was found in our records.
